taught by bridging the gap between the traditional solve a bunch of equations for a very simple model approach and the
computational methods that are used to solve research problems While some recent textbooks include exercises using pre
packaged Hartree Fock DFT calculations this is largely limited to giving students a proverbial black box The DIY do it
yourself approach taken in this book helps student gain understanding by building their own simulations from scratch The
reader of this book should come away with the ability to apply and adapt these techniques in computational chemistry to his
or her own research problems and have an enhanced ability to critically evaluate other computational results This book is
mainly intended to be used in conjunction with an existing physical chemistry text such as McQuarrie Simon s Physical
Chemistry A Molecular Approach but it is also well suited as a stand alone text for upper level undergraduate or intro
graduate computational chemistry courses Assumes no computational background Enables students to build simulations from
scratch to reproduce famous literature calculations Teaches a variety of computational numerical simulation methods
applicable to solving chemical problems Designed to play well with McQuarrie Simon s landmark P CHEM text but can be
