Functions, Data, and Models Sheldon P. Gordon, Florence S. Gordon, 2025-02-24 This is a college algebra level textbook written to provide the kind of mathematical knowledge and experiences that students will need for courses in other fields such as biology chemistry business finance economics and other areas that are heavily dependent on data either from laboratory experiments or from other studies The focus is on the fundamental mathematical concepts and the realistic problem solving via mathematical modeling rather than the development of algebraic skills that might be needed in calculus Functions Data and Models presents college algebra in a way that differs from almost all college algebra books available today Rather than going over material covered in high school

courses the Gordons teach something new Students are given an introduction to data analysis and mathematical modeling presented at a level that students with limited algebraic skills can understand The book contains a rich set of exercises many of which use real data Also included are thought experiments or what if questions that are meant to stretch the student s mathematical thinking Elementary Statistics Mario F. Triola,2004 Elementary Statistics has been written for the introductory statistics course and students majoring in any field Although the use of algebra is minimal students should have completed at least an elementary algebra course In many cases underlying theory is included but this book does not stress the mathematical rigor more suitable for mathematics majors Triola is the 1 best seller in the market long recognized for its student friendly pedagogy and wealth of exercises using real data The ninth edition offers new large and small data sets a greater emphasis on interpreting results and improved flexible technology coverage with many examples and exercises covering a wide variety of different and interesting statistical applications *Christian Higher Education* David S.
