Touch Screen Tablets Touching Children's Lives Joanne Tarasuik, Gabrielle Strouse, Jordy Kaufman, 2018-02-28 Touch screen tablets have greatly expanded the technology accessible to preschoolers, toddlers and even infants given that they do not require the fine motor skills required for using traditional computers. Many parents and educators wish to make evidence-based decisions regarding young children's technology use yet technological advancements continue to occur faster than researchers can keep up with. Accordingly, despite touch screen tablets entering society more than 5 years ago, we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example, theoretical papers have discussed how interactive media activities differ from physical toys and passive media (Christakis 2014) and how educational apps development should utilise the four pillars of learning (Hirsh, Pasek et al 2015). Yet there has been little experimental research published on young children and touch screen use.

Agricultural Implications of the Fukushima Nuclear Accident Tomoko M. Nakanishi, Keitaro Tanoi, 2016-02-25 This book reports the results from on-site research into radioactive cesium contamination in various agricultural systems affected by the Fukushima Daiichi Nuclear Power Plant accident that occurred in March 2011. This is the second volume from the research groups formed in the Graduate School of Agricultural and Life Sciences of The University of Tokyo who have published the initial data in their first volume. In this book, additional data collected in the subsequent years are presented to show how the radioactivity level in agricultural products and their growing environments have changed with time. The data clarify the route by which radioactive materials entered agricultural products and their movement among different components e.g. soil, water and trees within an environmental system e.g. forests. The book consists of various topics including radioactivity inspection of food products, decontamination trials for rice and livestock production, the state of contamination in wild animals and birds, trees, mushrooms and timber, the dynamics of radioactivity distribution in mountain and paddy fields, damage incurred by the forestry and fishery industries and the change in consumers' minds. The last chapter introduces a real-time radioisotope imaging system, the forefront technique to visualize actual movement of cesium in soil and in plants. This is the only book to provide systematic data about the actual change of radioactivity and thus is of great value for all researchers who wish to understand the effect of radioactive fallout on agriculture. The project is ongoing; the research groups continue their work in the field for further evaluation of the long-term effects.
