**BACKGROUND INFORMATION**

The biosphere is the thin layer of land, air and water around the earth's surface that supports life. The abiotic, or non-living, portion of each ecosystem in the biosphere includes the flow of energy, nutrients, water, and gases and the concentrations of organic and inorganic substances in the environment. The biotic, or living, portion includes organisms based on their methods of acquiring energy: the primary producers, largely green plants; the consumers, which include all the animals; and the decomposers, which include the microorganisms that break down the remains of plants and animals into simpler components for recycling in the biosphere.

Ecological pyramids are a graphical representation in the shape of a pyramid to show the feeding relationship of groups of organisms, and the flow of energy or biomass through the different trophic levels in a given ecosystem.

**Theological Shorthand** David Bailey, 2019-08-08 In Youth Ministry and Theology Shorthand David Bailey explores the dialogue between practice and theological education through the lens of youth ministry This qualitative study illuminates how youth ministers talk about their work amongst young people Through the slowing down of the youth ministry process it is discovered that youth ministers speak in theological shorthand Theological shorthand is a paradox it is both meaningful it fuels long term sacrificial service amongst young people and it is problematic as it risks untethering youth ministry from the wider narrative of the Christian story The book will appeal to youth ministers clergy academics graduate and post graduate students but also informed volunteers involved in youth ministry Through the discipline of practical theology it correlates the voices of the youth ministers a set of materials used to deepen faith and contemporary expressions of sung worship These are then brought into conversation and explored via different aspects of Trinitarian theology to deepen the theological grammar within contemporary youth ministry and to help develop theological literacy **Post-Exercise Recovery: Fundamental**

Ostojic, 2016-05-25 Physiological responses after maximal and submaximal exercise are routinely monitored in a plethora of diseases e g cardiovascular diseases cancer diabetes asthma neuromuscular disorders and normal populations e g athletes youth elderly while slower or irregular post exercise recovery usually indicates poor health and or low fitness level Abnormal post exercise recovery as assessed via blunted post exercise heart rate dynamics helps to predict the presence and severity of coronary artery disease while differences in recovery outcomes in athletes might discriminate between fit and unfit individuals Disturbances in post exercise recovery might be due to acute or persistent changes in 1 adaptive responses mediated by the autonomic nervous system and vasodilator substances 2 cellular bioenergetics and or 3 muscular plasticity Preliminary evidence suggests possible role of time dependent modulation of nitric oxide synthase and adenosine receptors during post exercise recovery yet no molecular attributes of post exercise recovery are revealed so far Currently several markers of post exercise recovery are used e g heart rate measures hormone profiles biochemical and hematological indices however none of them meets all criteria to make its use generally accepted as the gold standard In addition recent studies suggest that different pharmacological agents and dietary interventions or manipulative actions e g massage cold water immersion compression garments athletic training administered before during or

immediately after exercise could positively affect post exercise recovery There is a growing interest to provide more evidence based data concerning the effectiveness and safety of traditional and novel interventions to affect post exercise recovery The goals of this research topic are to critically evaluate the current advances on mechanisms and clinical implications of post exercise recovery and to summarize recent experimental data from interventional studies This knowledge may help to identify the hierarchy of key mechanisms and recognize methods to monitor and improve post exercise recovery in both health and disease

**Case Studies in Innovative Clinical Trials** Kristine Broglio,Binbing Yu,2023-11-27 Drug development is a strictly regulated area As such marketing approval of a new drug depends heavily if not exclusively on evidence generated from clinical trials Drug development has seen tremendous innovation in science and technology that has revolutionized the

treatment of some diseases And yet the statistical design and practical conduct of the clinical trials used to test new therapeutics for safety and efficacy have changed very little over the decades Our approach to clinical trials is steeped in convention and tradition The large fixed randomized controlled trial methods that have been the gold standard are well understood and expected by many trial stakeholders However this approach is not well suited to all aspects of modern drug development and the current competitive landscape We now see new therapies that target a small fraction of the patient population rare diseases with high unmet medical needs and pediatric populations that must wait for years for new drug approvals from the time that therapies are approved in adults Large randomized clinical trials are at best inefficient and at worst completely infeasible in many modern clinical settings Advances in technology and data infrastructure call for innovations in clinical trial design Despite advances in statistical methods the availability of information and computing power the actual experience with innovative design in clinical trials across industry and academia is limited This book will be an important showcase of the potential for these innovative designs in modern drug development and will be an important resource to guide those who wish to undertake them for themselves This book is ideal for professionals in the pharmaceutical industry and regulatory agencies but it will also be useful to academic researchers faculty members and graduate students in statistics biostatistics public health and epidemiology due to its focus on innovation

**Key Features** Is written by pharmaceutical industry experts academic researchers and regulatory reviewers this is the first book providing a comprehensive set of case studies related to statistical methodology implementation regulatory considerations and communication of complex innovative trial design Has a broad appeal to a multitude of readers across academia industry and regulatory agencies Each contribution is a practical case study that can speak to the benefits of an innovative approach but also balance that with the real life challenges encountered A complete understanding of what is actually being done in modern clinical trials will broaden the reader's capabilities and provide examples to first mimic and then customize and expand upon when exploring these ideas on their own
