

MPLAB XC8 GETTING STARTED GUIDE

MPLAB® XC8 Getting Started Guide

This document provides a starting point for programmers who are just starting out with the MPLAB® XC8 C Compiler, particularly those who are unfamiliar with embedded programming or Microchip devices.

The following headings are linked to sections in this guide:

Creation of a Project in MPLAB X IDE

Foundation Code

Compilation

Specifying Device Configuration Bits

Accessing Device Registers

Disabling Peripherals that Share Port Pins

Downloading and Running Your Code

Implementing a Main Loop

Using Interrupts

Conclusion

While the MPLAB XC8 C Compiler can target hundreds of 8-bit PIC devices, this guide uses the PIC18F87J11 microcontroller (MCU) with a PICDEM PIC18 Explorer Board. However, the information presented in this document can be used in conjunction with the XC8 C Compiler to create and compile equivalent code for almost any 8-bit MCU and hardware.

This guide describes using the compiler from the MPLAB X Integrated Development Environment (IDE); however, you can use it from the command-line, as well. If you have a development board, you can download and run code on your device. You can also use the simulator in MPLAB X IDE to confirm the operation of your code.

To demonstrate getting started with the MPLAB XC8 C Compiler, you will be guided through the creation of a project that you can build and run. The project flashes an LED that is connected to a port pin. To accomplish this, the following actions, presented here in summary, are performed. They are expanded and described in more detail as you progress through the pages of this guide.

- Include `<xc.h>` in your source file(s).
- Set the device Configuration bits using the `config` pragma.
- Disable any peripheral that uses the pin(s) used by the port.
- Initialize the port's data direction register, and write values to the port latch.
- Use a delay to ensure you can see the changes in state.

The guide assumes that you have MPLAB X IDE and MPLAB XC8 C compiler installed and activated (if applicable) before you commence. You could also use an evaluation version of the compiler, or the compiler operating in Free mode.

For assistance installing or activating the compiler, refer to *Installing and Licensing MPLAB XC C Compilers* (DS50002059). The document can be downloaded from the Microchip Technology web site, www.microchip.com.
