Nanotechnology Geoffrey Hunt, Michael Mehta, 2013-06-17 Nanotechnology technology at the molecular level is held out by many as the Holy Grail for creating a trillion dollar economy and solving problems from curing cancer to reprocessing waste into products and building superfast computers Yet as with GMOs many view nanotech as a high risk genie in a bottle that once uncorked has the potential to cause unpredictable perhaps irreversible environmental and public health disasters With the race to bring products to market there is pressing need to take stock of the situation and to have a full public debate about this new technological frontier Including contributions by renowned figures such as Roland Clift K Eric Drexler and Arpad Pusztai this is the first global overview of the state of nanotech and society in Europe the USA Japan and Canada examining the ethics the environmental and public health risks and the governance and regulation of this most promising and potentially most dangerous of all technologies **Rethinking Human Enhancement** Laura Y. brings unprecedented technological revolution However it comes with heightened ethical and legal concerns Nanotechnology is now present in every aspect of life without full public awareness Some branches of nanotechnology utilize human DNA and affect humans in a multitude of unprecedented ways Legal and ethical issues have been long discussed they tend to be managed in individual fields rather than taken as a whole Ethical concerns are especially important for vulnerable populations such as targeted minority groups or people from the Global South This book provides a realistic minimalist ethical solution that can be applied to any situation utilizing a human rights based approach for universal application This encompasses ethics based on Aristotelian principles into technology and the public good The book includes case examples addressing past present and future concerns *Bedford's Tech Edge* ,2002-07 **Industrial Management** ,2004
