1C.8.12.5, 12.6 Describe the basic molecular structures and primary functions of the four major categories of biological macromolecules

ORGANIC MACROMOLECULES

MACROMOLECULE	MONOMER	STRUCTURE	FUNCTION	EXAMPLES
Carbohydrate	Monosaccharide		Short-term storage of energy	Glucose, Sucrose, Starch, Sugar, Cell Walls, Exocytosis
Protein	Amino Acid		Combats/starts immunity and fighting diseases, regulates what enters and leaves a cell, controls the rate of chemical reactions, provides structural support in the form of hair and nails	Antibodies, enzymes, collagen, hair and nails (keratin), Hemoglobin
Lipids	lipid Monomer - Fat (Triglycerides) are made of a Glycerol head and fatty acid tail. Steroids and cholesterol are made of a 4-ring structure		Long-term energy storage; makes up most of our cell membranes; act as chemical messengers	Fats (Triglycerides); Steroids (cholesterol, estrogen and testosterone); Phospholipids
Nucleic Acids	Nucleotide		RNA, DNA	DNA & RNA

Macromolecule Review Packet:

Physical Review, 2000-06 Publishes papers that report results of research in statistical physics plasmas fluids and related interdisciplinary topics There are sections on 1 methods of statistical physics 2 classical fluids 3 liquid crystals 4 diffusion limited aggregation and dendritic growth 5 biological physics 6 plasma physics 7 physics of beams 8 classical physics including nonlinear media and 9 computational physics **Annual Review** Bunshi Kagaku Kenkyūjo, 2006 NTT Technical Review, 2004 **Cellulose: Biosynthesis and Structure** I.A. Tarchevsky, G.N. Marchenko, 2013-03-07 The monograph is written for specialists in plant physiology and biochemistry structural chemistry of polymers and for specialists in agriculture and in the paper and pulp industry It is an indispensable source of information *Russian Chemical Reviews*, 1997 **The Review of the River Plate**, 1963 The Review of the River Plate, January 11, 1963, 1963 **Plant Breeding Abstracts**, 1964 Dissertation Abstracts International, 2000 *Rubber Journal*, 1955 *Government reports annual index*, 199? *Pandex Current Index to Scientific and Technical Literature*, 1970 Government Reports Announcements & Index, 1990-09 *Macromolecules*, 1986 **International Review of Biochemistry** Robin Offord, 1979 *Giant Molecules* Charles E. Carraher, Jr., 2003-08-05 The Second Edition of *Giant Molecules* presents an introductory textbook on large molecules that exhibit specific physical and biological properties related to their size orientation and environment making this subject accessible to students from high school to universities Written by Charles Carraher author of more than forty books on the subject this up to date guide presents material in an integrated fashion marrying fundamentals with illustrative applications The text assumes no previous formal scientific training and includes new and updated questions and answers a glossary of relevant terms bibliographies visual aids and related Web links in every chapter *Giant Molecules Second Edition* will appeal to individuals who have a personal or professional interest in polymers as well as to college chemistry and materials science students who study polymers **Giant Molecules** Raymond B. Seymour, Charles E. Carraher (Jr.), 1990-05-14 *Giant Molecules Essential Materials for Everyday Living and Problem Solving* includes fascinating historical information on the development of polymer science supported by a glossary and review questions with answers **MACROMOLECULES [Vols 1-5]**, 1959 *Macromolecules: Structure and Function* Finn Wold, 1971 In this book we discuss the status of the structure function analysis of biological macromolecules and macromolecular complexes The ultimate goal of the analysis must be to explain all the functional properties of the molecules in question in terms of their completely defined three dimensional structure and the analysis thus contains three separate components the determination of structure the determination and quantitation of function and final correlation of this information into the structure function model The first component the structural analysis is reviewed only briefly and this book therefore leans heavily on Barker's and Van Holde's books in this series for proper background and documentation for this component The second component the analysis of functional properties is given broader consideration Chapters I 2 5 and

9 but the main emphasis has been the step by step development of the structure function models It is hoped that this approach will clearly illustrate the typical progression of scientific model building from the first clear definition of the problem and the statement of the hypothesis through ever increasing refinements of experimental tests toward the final answer It is also hoped that the statements of philosophy principles and scientific method that are the bases for this approach are of broad enough validity to survive even after its models have become obsolete With this approach it is essential to inform the reader in unequivocal terms that this book is not a summary of final conclusions and complete stories which can be submitted to memory Each system discussed should be considered very critically and the models should be evaluated in terms of the available evidence The only facts are the experimental data the interpretation of this data into models is only convincing to the extent that it makes logical sense to the individual examining it Since both space and common sense prohibits a continuous reiteration of this statement throughout the book be prepared to encounter some models and hypotheses which are based on sound experimental evidence as well as some which have no experimental basis at all In neither case are they facts but in either case they represent ideas which can be subjected to further experimental tests If the book helps to sharpen this critical evaluation of both ideas and the experimental test of the hypotheses one of its major purposes has been fulfilled
