BIM in Small-Scale Sustainable Design François Lévy, 2011-12-13 Any architect doing small or medium scaled projects who is also vested in sustainable design but is not yet doing BIM will enjoy this book's overall focus. Architosh.com This work is the leading guide to architectural design within a building information modeling BIM workflow giving the practitioner a clear procedure when designing climate load dominated buildings. The book incorporates new information related to BIM integrated practice and sustainable design as well information on how designers can incorporate the latest technological tools. Each chapter addresses specific topics such as natural ventilation for cooling passive solar heating rainwater harvesting and building hydrology optimizing material use and reducing construction waste and collaborating with consultants or other building professionals such as engineers and energy modelers.

Interactive Data Processing and 3D Visualization of the Solid Earth Daniel Patel, 2022-02-21 This book presents works detailing the application of processing and visualization techniques for analyzing the Earth's subsurface. The topic of the book is interactive data processing and interactive 3D visualization techniques used on subsurface data. Interactive processing of data together with interactive visualization is a powerful combination which has in the recent years become possible due to hardware and algorithm advances. The combination enables the user to perform interactive exploration and filtering of datasets while simultaneously visualizing the results so that insights can be made immediately. This makes it possible to quickly form hypotheses and draw conclusions. Case studies from the geosciences are not as often presented in the scientific visualization and computer graphics community as e.g. studies on medical biological or chemical data. This book will give researchers in the field of visualization and computer graphics valuable insight into the open visualization challenges in the geosciences and how certain problems are currently solved using domain specific processing and visualization techniques. Conversely readers from the geosciences will gain valuable insight into relevant visualization and interactive processing techniques. Subsurface data has interesting characteristics such as its solid nature large range of scales and high degree of uncertainty which makes it challenging to visualize with standard methods. It is also noteworthy that parallel fields of research have taken place in geosciences and in computer graphics with different terminology when it comes to representing geometry describing terrains interpolating data and example based synthesis of data. The domains covered in this book are geology digital terrains seismic data reservoir visualization and CO2 storage. The technologies covered are 3D visualization visualization of large datasets 3D modelling machine learning virtual reality seismic interpretation and multidisciplinary collaboration. People within any of these domains and technologies are potential readers of the book.
