The Ultimate DIY Guide to Building Motorcycles Simon Phil M D, 2022-02-24

Motorcycles were developed in the 19th century during the invention of the motorcycle. The first commercial motorcycle was built by Edward Butler in Great Britain in 1884. It employed a horizontal single cylinder engine mounted between two steerable front wheels and a drive shaft connected to the rear wheel. By 1900 many motorcycles were being produced as they were made by adding an engine to a bicycle frame. The development of motorcycles led to a competition between motorcycles and Tourist Trophy races. In 1907 as a result of motorcycle races, the proving ground for a new design was the supercharged multi-valve engine mounted on an aerodynamic frame. In this simple DIY guide you will learn the basics of constructing a motorcycle and how to reconstruct one the way you want. You will also find out what you need to ensure your bike is perfect the way you want it after reading this book you will see how easy it is to build a motorcycle from the scratch. So enjoy and read on
