Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated control unit features the latest control technology. Instead of a hydraulic accumulator, a compact electronic controller is equipped with a very powerful electro-hydraulic system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To ensure efficient truck operation and safety, each truck model features two warning that identify the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the seat interface. In addition, the control unit activates a variety of measures according to the error's hazard potential.

- Working light flashes
- Flashing indicator of the internal communication system
- The truck brakes with automatic brake activation and off the engine brake
- The main battery (as the emergency) function, the internal communication system activates off
- An error code appears on display

These measures can be activated by switching off the communication system with the key switch. During a restart, the control unit displays whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code appears on the display and one of the measures listed above is activated.

Changing the controller

⚠ Warning

Prohibit independent component storage due to electrostatic discharge. Independent storage is warning elements will cause if the controller is stored.

The controller is equipped with a "float plug" which is attached to the back to avoid entry of water. Communication cable plug can float too. The upper part of the cable and the software version of the controller can be read out via the back connector.

📖 Note

If the controller is replaced, the permitted spare part controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
