- 1. Create a table of at least four values for the function that includes two points of intersection between the airplane and rainbow.**

X	Y
0	44
2	32
4	20
6	8

- 2. Answer the following questions in complete sentences.**

- What is the domain and range of the rainbow? Explain what the domain and range represent. Do all of the values make sense in this situation? Why or why not?**

The domain of the rainbow is $(-6, 6)$. It represents the set of values that we can plug in. The range of the rainbow is $(0, 36)$. This represents the set of values that the function assumes. Yes, the values do make sense since -6 and 6 have a max of 36 which is the highest output here.

- What are the x and y intercepts of the rainbow and explain what they represent.**

The x intercept is at $(-6, 6)$. This represents the two points where the rainbow ends. The y intercept is at $(0, 36)$. This represents how high the rainbow would go.

- Is the linear function you created with your table positive or negative? Explain.**
