**Nutricines and Derivatives of Nutrients in Animal Health and Disease Prevention** Tao Wang, HongGu Lee, 2024-03-20. Good animal health is of great importance for the efficient production of animal-derived foods at a low cost. The demand for solutions for animal health maintenance and disease prevention is a major global challenge in animal production, food safety and public health. The animal body has a complete self-defense system including oxidation and anti-oxidation balance, immune activation and suppression balance, pro and anti-inflammatory balance, which can help the host against various factors that endanger normal life activities. Nowadays, the strategy of nutrition-based health has become an increasingly important solution for animal health maintenance and disease prevention. Nutrients: carbohydrates, fats, proteins, minerals, vitamins, et al. and nutricines: carotenoids, enzymes, fatty acids, flavors, oligosaccharides, organic acids, phospholipids, polyphenols, et al. are two major categories of components in feeds. Nutricines and some derivatives of nutrients: vitamin derivatives, amino acid derivatives, et al. have been intensively studied in animal and cell culture models, and their roles in animal health maintenance and disease prevention are intimately known. **Monthly Record of Scientific Literature**, 1907. **Engineering Index**, 1925.
