DSAM XT and DOCSIS® 3.0 Upgrade Customer Reference Guide

- Speeds testing and troubleshooting with faster boot and navigation
- Enables time-saving, innovative features and options such as the latest firmware upgrades and updates (for example, Digital Quality Index [DQI])

Digital Service Analysis Meters (DSAMs) have a remarkable life span that leads to a low cost of ownership. Customers like you are extending the life span of their DSAMs by upgrading them with XT and DOCSIS 3.0 hardware to keep pace as technology evolves. This Customer Reference Guide provides helpful information for use in planning your XT and DOCSIS 3.0 upgrades.

Faster Test Capability with XT Hardware

DSAMs with XT hardware operate with an updated, more powerful processor that operates faster and shortens test and repair time. A color display provides vivid, crisp results for easier interpretation. The XT hardware prepares the way for new, advanced tests and procedures letting you take advantage of the latest developments through firmware updates. Upgrading to XT hardware will extend the life of your meter and your investment, lowering the total cost of ownership.

Benefits of the XT upgrade include:

- Complete more jobs in less time with:
 - boot times of ~15 seconds, three times (3x) faster than non-XT DSAM
 - noticeably faster screen transitions, two times (2x) faster than non-XT DSAM
- See vivid measurement results with:
 - new, crisper display that is easier to read, does not fade in sunlight, and is unaffected by extreme temperatures
 - improved screen contrast
 - a color display that simplifies measurements
- Test multiple service tiers quickly and efficiently with dual media access control (MAC) address capability with baseline privacy interface plus (BPI+) and Cable-Labs® certificates.
- Take advantage of the new innovative testing options for XT DSAMs with:
 - **SmartID™**: Advanced coax probes enable extremely quick, comprehensive home network qualification, eliminating repeat truck rolls, for more affordable and effective troubleshooting.
 - **Field View QAM™**: Technicians see an upstream carrier impairments dashboard at field test points to speed fault diagnosis and to determine root causes. They can quickly verify fixes with a real-time view of headend signal quality transmitted from field test points.
 - **Equalizer Mode**: Graphs the DOCSIS receiver equalizer taps for a quicker view of problems causing reflections, and displays in-channel response and group delay for the tuned downstream channel.
 - **WiFi**: Verifies WiFi network strength and connectivity in addition to testing data communication.
 - **Optical power meter**: Connects to a USB power meter (JDSU MP60A or MP80A) to verify or troubleshoot node light levels.

Note: All new and future advanced digital testing tools for the DSAM platform require XT hardware.
