Jose Beirao, 2012-09-28 CityMaker presents a method and a set of tools to generate alternative solutions for an urban context

The method proposes the use of a combined set of design patterns encoding typical design moves used by urban designers

The combination of patterns generates different layouts which can be adjusted by manipulating several parameters in

relation to updated urban indicators The patterns were developed from observation of typical urban design procedures first

encoded as discursive grammars and later translated into parametric design patterns The CityMaker method and tools allows

the designer to compose a design solution from a set of programmatic premises and fine tune it by pulling parameters whilst

checking the changes in urban indicators These tools improve the designer's awareness of the consequences of their design
