

Kysor Instrumentation Troubleshooting Guide

Troubleshooting Emergency One Commercial System

The Medallion II instrumentation system is a Microprocessor based system utilizing both Sensor and Data bus information to display both gauge and warning information. With a microprocessor system the need for a good clean Ground is very important. Whenever the system is giving erratic behavior please check the grounds between the VDC(Pin J & H), and Battery(Ground post). Knowing that the Ground is good as well as the Battery and Ignition connections are good will save a lot of trouble shooting time.

Gauge Troubleshooting

All the gauges are built the same way. They all have a Microprocessor, Stepper Motor, and LED for lighting. Knowing this will add in trouble shooting for a faulty gauge. The gauges get their information by a single data line connection to the VDC. This is important because now the Gauge harness is a universal harness. This means you can plug any connector into any gauge and it should work assuming that the information is coming across that data line.

If none of the gauges function these checks can be made.

1. Measure battery voltage on pin F at the VDC connector.
2. Turn the ignition key on. There should be 12 volts at pin E of the VDC.
3. Check to be sure Pin J and H of the VDC goes to battery ground. These two pins are internally connected on the VDC.
4. If the gauges will not power up check the connection at pin E of the VDC. If this pin is shorted to the battery with power off the system will not power up.

If the system powers up but a single gauge or several gauges don't function, perform the following tests to determine if you have a harness or a gauge failure.

1. As you turn on the key switch, have someone watch the gauges on the pump panel. All the gauges should go fully counter clockwise and vibrate. This is what we call reset or zero calibration and they do this every time the ignition key is turned on.
2. If any of the gauges do not reset, swap instrument connectors with a gauge that did reset and repeat process.
3. At this point the Vehicle is not running and the key is on. The gauges that have information will start working - Fuel level and Voltage. The other gauges will not work until the engine is running.
4. If the same gauge still fails to reset the instrument is bad but, if it now does reset the harness may be bad. Look for the following voltage information on the suspect 5-pin gauge connector with key on.

If a gauge will not light up check for 12 volts at pin G of the gauge harness connector with the headlight switch on.
