Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated control unit houses the drive control technology. Instead of a hydraulic accumulator, a compact electronic controller is equipped with a very powerful electro-hydraulic system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To ensure efficient truck operation and safety, each truck model has a control unit that is specifically adapted to the truck.

Troubleshooting

The operation of the electronic control unit is indicated by various status lights. The electronic controller displays various error messages and warnings on the display or on the warning indicator on the control unit. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Warning light flashes
- Activation indicator of the manual emergency stop
- The truck brakes with automatic emergency stop and all hydraulic valves
- The manual brake (as the emergency function) the manual emergency stop activates off
- An error code appears on the display

These functions can be activated by switching off the emergency stop and the warning light. During a fault, the control unit shows whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code appears on the display and one of the measures listed below is to be taken.

Changing the controller

⚠ Warning

Prohibit independent component storage due to electrostatic discharge. Independent storage is warning elements will cause if the controller is stored.

The controller is equipped with a "float plug" which is attached to the back to avoid entry of water. Communication cable plug can float too. The upper part of the cable and the software version of the controller can be read out via the back connector.

If the controller is replaced, the permitted spare part controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
