

Exponential Growth and Decay

Date _____ Period _____

Solve each exponential growth/decay problem.

- 1) For a period of time, an island's population grows at a rate proportional to its population. If the growth rate is 3.8% per year and the current population is 1543, what will the population be 5.2 years from now?
- 2) During the exponential phase, *E. coli* bacteria in a culture increase in number at a rate proportional to the current population. If the growth rate is 1.9% per minute and the current population is 172.0 million, what will the population be 7.2 minutes from now?
- 3) Radioactive isotope Carbon-14 decays at a rate proportional to the amount present. If the decay rate is 12.10% per thousand years and the current mass is 135.2 mg, what will the mass be 2.2 thousand years from now?
- 4) A savings account balance is compounded continuously. If the interest rate is 3.1% per year and the current balance is \$1077.00, in how many years will the balance reach \$1486.73?

1) Using the exponential growth formula, $A = P e^{rt}$, where A is the amount after time t , P is the principal, r is the rate, and t is the time. In this problem, $P = 1543$, $r = 0.038$, and $t = 5.2$. Substitute these values into the formula and solve for A .

2) Using the exponential growth formula, $A = P e^{rt}$, where A is the amount after time t , P is the principal, r is the rate, and t is the time. In this problem, $P = 172.0$, $r = 0.019$, and $t = 7.2$. Substitute these values into the formula and solve for A .

Synthesis of Computational Structures for Analog Signal Processing Cosmin Radu Popa, 2011-08-31 *Synthesis of Computational Structures for Analog Signal Processing* focuses on analysis and design of analog signal processing circuits. The author presents a multitude of design techniques for improving the performances of analog signal processing circuits and proposes specific implementation strategies that can be used in CMOS technology. The author's discussion proceeds from the perspective of signal processing as it relates to analog. Included are coverage of low power design, portable equipment, wireless nano sensors and medical implantable devices. The material is especially appropriate for researchers and specialists in the area of analog and mixed signal CMOS VLSI design as well as postgraduate or Ph D students working on analog microelectronics.

Comprehensive Treatise of Electrochemistry Peter Horsman, Brian E. Conway, E. Yeager, 2013-03-12 It is now time for a comprehensive treatise to look at the whole field of electrochemistry. The present treatise was conceived in 1974 and the earliest invitations to authors for contributions were made in 1975. The completion of the early volumes has been delayed by various factors. There has been no attempt to make each article emphasize the most recent situation at the expense of an overall statement of the modern view. This treatise is not a collection of articles from *Recent Advances in Electrochemistry* or *Modern Aspects of Electrochemistry*. It is an attempt at making a mature statement about the present position in the vast area of what is best looked at as a new interdisciplinary field. Texas A M University J O M Bockris, University of Ottawa B E Conway, Case Western Reserve University Ernest Yeager, Texas A M University Ralph E White. Preface to Volume 8: Experimental methods in electrochemistry are becoming more diverse. This volume describes many of the new techniques that are being used as well as some of the well established techniques. It begins with two chapters 1 and 2 on electronic instrumentation and methods for utilization of microcomputers for experimental data acquisition and reduction. Next two chapters 3 and 4 on classical methods of electrochemical analysis are presented: ion selective electrodes and polarography.
