Transformation of Higher Education Institutions in Post-Apartheid South Africa Chaunda L. Scott, Eunice N. Ivala, 2019-02-21 This book outlines successful transformation strategies and efforts that have been developed to assist the South African higher education system in moving beyond its post apartheid state of being Through case studies authored by South African higher education scholars and scholars affiliated with South African institutions this book aims to highlight the status of transformation in the South African higher education system demonstrate the variety of transformation initiatives used in academic institutions across South Africa and offer recommendations to further advance this transformation Written for scholars and advanced students of higher education in international settings this volume aims to support quality research that benefits the demographic composition of South African academics and students and offers lessons that can inform higher education transformation in similarly multicultural societies ICEL 2018 13th International Conference on e-Learning Professor Eunice Ivala, 2018-07-05 *The Unresolved National Question in South Africa* Edward Webster, Karin Pampallis, John Mawbey, Jeremy Cronin, 2017-03-01 This volume examines the way in which various strands of left thought have addressed the National Question The re emergence of debates on the decolonisation of knowledge has revived interest in the National Question which began over a century ago and remains unresolved Tensions that were suppressed and hidden in the past are now being openly debated Despite this the goal of one united nation living prosperously under a constitutional democracy remains elusive This edited volume examines the way in which various strands of left thought have addressed the National Question especially during the apartheid years and goes on to discuss its relevance for South Africa today and in the future Instead of imposing a particular understanding of the National Question the editors identified a number of political traditions and allowed contributors the freedom to define the question as they believed appropriate in other words to explain what they thought was the Unresolved National Question This has resulted in a rich tapestry of interweaving perceptions The volume is structured in two parts The first examines four foundational traditions Marxism Leninism the Colonialism of a Special Type thesis the Congress tradition the Trotskyist tradition and Africanism The second part explores the various shifts in the debate from the 1960s onwards and includes chapters on Afrikaner nationalism ethnic issues black consciousness feminism workerism and constitutionalism The editors hope that by revisiting the debates not popularly known among the scholarly mainstream this volume will become a catalyst for an enriched debate on our identity and our future **Paper Trade Journal** ,1913 **When Political Transitions Work** Fanie du Toit, 2018-07-26 The peaceful end of apartheid in South Africa was a monumental event in late twentieth century history A racist regime built upon a foundation of colonialist exploitation South Africa had become by that point a tinderbox suffused with day to day violence and political extremism on all sides Yet two decades later it was a stable democracy with a growing economy How did such a deeply divided conflicted society manage this remarkable transition In *When Political Transitions Work* Fanie du Toit who has been a participant and

close observer in post conflict developments throughout Africa for decades offers a new theory for why South Africa's reconciliation worked and why its lessons remain relevant for other nations emerging from civil conflicts. He uses reconciliation as a framework for political transition and seeks to answer three key questions: how do the reconciliation processes begin, how can political transitions result in inclusive and fair institutional change, and to what extent does reconciliation change the way a society functions. Looking at South Africa, one of reconciliation's most celebrated cases, Du Toit shows that the key ingredient to successful reconciliations is acknowledging the centrality of relationships. He further develops his own theoretical approach to reconciliation as interdependence: the idea that reconciliation is the result of an integrated process of courageous leadership, fair and inclusive institutions, and social change built toward a mutual goal of prosperity. As Du Toit conveys, the motivation for reconciliation is the long-term well-being of one's own community as well as that of enemy groups. Without ensuring the conditions in which one's enemy can flourish, one's own community is unlikely to prosper sustainably.

Drawing for Science Education Phyllis Katz, 2017-03-23. This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation (Audubon, Linnaeus), A process (how plants grow over time, what happens when chemicals combine), Conceptions of what science is and who does it, Images of identity development in science teaching and learning.
