Naval Research Logistics Quarterly, 1954 *Yearbook of International Organizations 2014-2015, Volumes 1a & 1b (Set)*
Union of International Associations, 2014-06-16 Volume 1 A and B covers international organizations throughout the world comprising their aims activities and events 'And I quote...' Elizabeth Knowles, 2018-09-19 Quotations are an essential part of the fabric of the language In And I quote Elizabeth Knowles draws on her experience editing the Oxford Dictionary of Quotations and employs a wide repertoire of examples ranging from the classical canon to contemporary popular culture to illuminate just how and why we quote Her investigation focuses on how we find choose and use quotations in 21st century English but it also leads her back in time to follow the journeys taken by individual quotes as their meaning changes subtly and sometimes not so subtly over the decades and in many cases the centuries In following the often surprising stories of individual quotations we gain an understanding of how they establish themselves and to what degree they can develop a life independent of their original coinage Everyone has their own quotations vocabulary and each reader of the book will think of further items that they would use and wish to explore but the journeys mapped here illuminate the many fascinating ways in which quotations have embedded themselves in the language from the earliest dictionaries of quotations to the online world we experience today Mathematical Reasoning: The History and Impact of the DReaM Group Gregory Michaelson, 2021-11-20 This collection of essays examines the key achievements and likely developments in the area of automated reasoning In keeping with the group ethos Automated Reasoning is interpreted liberally spanning underpinning theory tools for reasoning argumentation explanation computational creativity and pedagogy Wider applications including secure and trustworthy software and health care and emergency management The book starts with a technically oriented history of the Edinburgh Automated Reasoning Group written by Alan Bundy which is followed by chapters from leading researchers associated with the group Mathematical Reasoning The History and Impact of the DReaM Group will attract considerable interest from researchers and practitioners of Automated Reasoning including postgraduates It should also be of interest to those researching the history of AI *The Performance of Africa's International Courts* James Thuo Gathii, 2020-11-26 The performance of international courts has traditionally been judged against criteria of compliance and effectiveness Whilst these are clearly desirable objectives for litigants before Africa's international courts this book shows that we must look beyond these criteria to fully appreciate the impact of these courts This book shows how litigants use their participation in international litigation to achieve other objectives to amplify political disputes with their governments to build their movement to educate the public about their cause and to challenge the status quo Chapters in this collection show how these courts act as coordination points for opposition political parties to name and shame dominant parties for violation of their organizational rights Others demonstrate how Africa's international courts serve as transitional justice mechanisms in which truth telling about ongoing conflict and authoritarian governance receives significant attention This attention serves

as a platform to galvanize resistance against continued authoritarian rule especially from outside the conflict countries Ultimately the book shows that these courts must be judged against new and broader criteria and understood as increasingly important venues for waging political social environmental and legal struggles

Big Data of Complex Networks presents and explains the methods from the study of big data that can be used in analysing massive structural data sets including both very large networks and sets of graphs As well as applying statistical analysis techniques like sampling and bootstrapping in an interdisciplinary manner to produce novel techniques for analyzing massive amounts of data this book also explores the possibilities offered by the special aspects such as computer memory in investigating large sets of complex networks Intended for computer scientists statisticians and mathematicians interested in the big data and networks Big Data of Complex Networks is also a valuable tool for researchers in the fields of visualization data analysis computer vision and bioinformatics Key features Provides a complete discussion of both the hardware and software used to organize big data Describes a wide range of useful applications for managing big data and resultant data sets Maintains a firm focus on massive data and large networks Unveils innovative techniques to help readers handle big data Matthias Dehmer received his PhD in computer science from the Darmstadt University of Technology Germany Currently he is Professor at UMIT The Health and Life Sciences University Austria and the Universit t der Bundeswehr M nchen His research interests are in graph theory data science complex networks complexity statistics and information theory Frank Emmert Streib received his PhD in theoretical physics from the University of Bremen and is currently Associate professor at Tampere University of Technology Finland His research interests are in the field of computational biology machine learning and network medicine Stefan Pickl holds a PhD in mathematics from the Darmstadt University of Technology and is currently a Professor at Bundeswehr Universit t M nchen His research interests are in operations research systems biology graph theory and discrete optimization Andreas Holzinger received his PhD in cognitive science from Graz University and his habilitation second PhD in computer science from Graz University of Technology He is head of the Holzinger Group HCI KDD at the Medical University Graz and Visiting Professor for Machine Learning in Health Informatics Vienna University of Technology

Hello World Hannah Fry, 2018-09-18 Shortlisted for the 2018 Baillie Gifford Prize and the 2018 Royal Society Investment Science Book Prize A beautifully accessible guide One of the best books yet written on data and algorithms Times UK If you were accused of a crime who would you rather decide your sentence a mathematically consistent algorithm incapable of empathy or a compassionate human judge prone to bias and error What if you want to buy a driverless car and must choose between one programmed to save as many lives as possible and another that prioritizes the lives of its own passengers And would you agree to share your family s full medical history if you were told that it would help researchers find a cure for cancer These are just some of the dilemmas that we are beginning to face

as we approach the age of the algorithm when it feels as if the machines reign supreme Already these lines of code are telling us what to watch where to go whom to date and even whom to send to jail But as we rely on algorithms to automate big important decisions in crime justice healthcare transportation and money they raise questions about what we want our world to look like What matters most Helping doctors with diagnosis or preserving privacy Protecting victims of crime or preventing innocent people being falsely accused Hello World takes us on a tour through the good the bad and the downright ugly of the algorithms that surround us on a daily basis Mathematician Hannah Fry reveals their inner workings showing us how algorithms are written and implemented and demonstrates the ways in which human bias can literally be written into the code By weaving in relatable real world stories with accessible explanations of the underlying mathematics that power algorithms Hello World helps us to determine their power expose their limitations and examine whether they really are improvement on the human systems they replace
