examination of the concentration form and cycling of trace metals and metalloids through the aquatic biosphere and has
sections dealing with the atmosphere the ocean lakes and rivers It discusses exchanges at the water interface air water and
sediment water and the major drivers of the cycling concentration and form of trace metals in aquatic systems The initial
chapters focus on the fundamental principles and modelling approaches needed to understand metal concentration
speciation and fate in the aquatic environment while the later chapters focus on specific environments with case studies and
research highlights Specific examples deal with metals that are of particular scientific interest such as mercury iron arsenic
and zinc and the book deals with both pollutant and required nutrient metals and metalloids The underlying chemical
principles controlling toxicity and bioavailability of these elements to microorganisms and to the aquatic food chain are also
discussed Readership Graduate students studying environmental chemistry and related topics as well as scientists and
