PHYSICS FORM 1 - 4 NOTES.

2. **Direct current motor:** In this case the commutator replaces the slip rings to enable the output to move in one direction. After a rotation of 180° , instead of current reversing, the connections to the external circuit are reversed so that current flows in one direction.

3. **Moving coil microphone:** It consists of a coil wound on a cylindrical soft-iron core which is placed between the poles of a magnet as shown.

As sound waves hit the diaphragm, they vibrate and move the coil which produces induced current into the coil and then it flows to the loudspeakers.
