Newman, 2016-08-16 Adapted from David M Newman s best selling Sociology Exploring the Architecture of Everyday Life this briefer streamlined version continues to show students how to see the unfamiliar in the familiar inspiring them to think critically about their own lives and social contexts As in the full text the author s approachable writing style and lively personal anecdotes make the Brief Edition a text that reads like a real book It uses the metaphors of architecture and construction to help students understand that society is not something that exists out there independently of themselves it is a human creation that is planned formed maintained or altered by individuals Rather than surveying every subfield in sociology the Brief Edition focuses on the individual and society the construction of self and society and social inequality in the context of social structures *Development of executive function during childhood*

Yusuke Moriguchi, Philip D Zelazo, Nicolas Chevalier, 2016-04-01 Executive function refers to the goal oriented regulation of one's own thoughts, actions and emotions. Its importance is attested by its contribution to the development of other cognitive skills e.g. theory of mind, social abilities e.g. peer interactions and academic achievement e.g. mathematics and by the consequences of deficits in executive function which are observed in a wide range of developmental disorders such as attention deficit hyperactivity disorder and autism. Over the last decade there has been growing interest in the development of executive function and an expanding body of research has shown that executive function develops rapidly during the preschool years with adult level performance being achieved during adolescence or later. This recent work together with experimental research showing the effects of interventions targeting executive function has yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function however and the multiplicity of underlying processes there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods including behavioral experiments, neuroimaging, eye tracking, computer simulation, observational methods and questionnaires are encouraged to contribute original empirical research. In addition to original empirical articles, theoretical reviews and opinion perspective articles on promising future directions are welcome. We hope that researchers from different areas such as developmental psychology, educational psychology, experimental psychology, neuropsychology, neuroscience, psychiatry, computational science etc. will be represented in the Research Topic. *Annual Report Mpumalanga* (South Africa).
