Ipcc Tax Paper May 2013:

The Oxford Handbook of International Climate Change Law Cinnamon P. Carlarne, Kevin R. Gray, Richard Tarasofsky, 2016-03-24 Climate change presents one of the greatest challenges of our time and has become one of the defining issues of the twenty first century The radical changes which both developed and developing countries will need to make in economic and in legal terms to respond to climate change are unprecedented International law including treaty regimes institutions and customary international law needs to address the myriad challenges and consequences of climate change including variations in the weather patterns sea level rise and the resulting migration of peoples The Oxford Handbook of International Climate Change Law provides an unprecedented and authoritative overview of all aspects of international climate change law as it currently stands with guidance for how it should develop in the future Over forty leading scholars and practitioners set out a comprehensive understanding of the legal issues that surround this vitally important but still emerging area of international law This book addresses the major legal dimensions of the problems caused by climate change not only in the content and nature of the international legal frameworks which need implementation at the national level but also the development of carbon trading systems as a means of reducing the costs of meeting emission reduction targets After an introduction to the field the Handbook assesses the relevant institutions the key applicable principles of international law the international mitigation regime and its consequences and climate change litigation before providing perspectives focused upon specific countries or regions The Handbook will be an invaluable resource for scholars students and practitioners of international climate change law It provides readers with diverse perspectives bringing together interpretations from different disciplines countries and cultures

China's Way to Carbon Emissions Reduction Ying Shen, 2015-08-18 Now that the most recent scientific estimates have shown that China has become the world's largest source of greenhouse gas emissions China's influence on the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change This thorough analysis based on an examination of climate status legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities The author conducts a comprehensive and in depth study on the three mainstream environmental policy instruments used to control carbon emissions the cap and trade system the carbon tax and command and control regulations in a Chinese context She reviews China's current policies and elucidates how the issues of climate change and global warming call for social environmental economic and legal reforms in China especially in the areas of administrative law and property rights law Among the issues and topics covered are the following key issues on designing and implementing each of the three policy instruments the choice of regulatory instruments for carbon emissions reduction in a socialist market

economy based on the discussion of market failure and government failure theories legal challenges from China's current administrative legislation and the definition of carbon emissions entitlements practical effect of China's climate change policy at the national provincial and local levels effectiveness of China's implementation of its international obligations lessons learned from schemes implemented in the United States and Australia comparison of China's seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China's ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation

Hayekian Systems William N. Butos, Thomas J. McQuade, 2023-03-02 The central theme in the work of F A Hayek was the problem of order in society and his focus was epistemological he was concerned with the constraints on knowledge the problems associated with its distribution the structures in which it inheres and the implications of these issues for the understanding of social phenomena generally But while his work has greatly improved our understanding of market processes application to more complex social arrangements was not an unambiguous success In seeking to progress beyond Hayek s difficulties in formulating a more general theory of spontaneous order this book fleshes out an analogy between social orders and the biological order detailed in Hayek s *The Sensory Order* into a theory of adaptive systems It focuses first on those aspects of the systems which enable them to learn about their environments and then on the entrepreneurial processes which implement their anticipatory capabilities The inclusion of anticipatory elements inspired by the work of Robert Rosen results in a theory of social orders which integrates many of the disparate findings of Austrian economists into a self consistent conceptual framework and has applicability to other social arrangements such as firms and governments Of particular interest is the interaction between the systems of science and government an issue of significant current concern which is comprehensively explored here both theoretically and empirically This book is essential reading for anyone interested in Hayek Austrian economics social theory and the history of economic thought more broadly

CLIMATE CHANGE and the road to NET-ZERO Mathew Hampshire-Waugh, 2021-06-01 CLIMATE CHANGE and the road to NET-ZERO is a story of how humanity has broken free from the shackles of poverty suffering and war and for the first time in human history grown both population and prosperity It s also a story of how a single species has reconfigured the natural

world repurposed the Earth's resources and begun to re-engineer the climate. The book uses these conflicting narratives to explore the science, economics, technology, and politics of climate change. NET ZERO blows away the entrenched idea that solving global warming requires a trade-off between the economy and environment, present and future generations, or rich and poor, and reveals why a twenty-year transition to a zero-carbon system is a win-win solution for all on planet Earth.

Reviews: Readers' Favorite Five Stars. An excellent layman's perspective of the climate problem today, how it has evolved over time, and the different approaches to solving the problem. I recommend it highly.

Mark Z. Jacobson, Professor of Civil and Environmental Engineering at Stanford University and author of *100% Clean Renewable Energy and Storage for Everything*. Mathew brings his wide-ranging experience of financial markets, particularly in modelling and forecasting, to add a unique insight to the climate challenge. On one hand, helping us understand how fossil fuels drove prosperity and let the world's population escape the poverty trap; whilst on the other, how rising levels of CO₂ in the atmosphere placed the world at mortal risk. In this book, Mathew's financial understanding comes to the fore, revealing why we need a sound understanding of economics, climate science, and financial modelling to give us the signals we need to act today.

Mark Campanale, Executive Chairman of the Carbon Tracker Initiative and founder of the unburnable carbon capital markets thesis. Provides a clear understanding of the technical complexities of reaching zero-carbon.

Hampshire Waugh approaches the subject with intellectual rigour, boundless curiosity, and compelling storytelling. A must-read for anyone interested in climate change and net-zero.

Vincent Gilles, Chief Investment Officer at Clim8 Invest. The book that says it all and answers all questions. Backed by data analysis and science, Hampshire Waugh explains how climate change, if left unchecked, threatens to unravel 200 years of human progress. But it need not end this way. The author shows that building a net-zero carbon economy is within human reach through focused innovation, riding down the experience curve, and reaching scale in clean energy technologies and solutions. Mathew shows how we can solve climate change and air pollution whilst driving development in the poorest parts of the world and without compromise for those already accustomed to the highest quality of life.

Geetu Sharma, Founder of AlphasFuture LLC, a sustainability-focused investment business. About the Author: Dr. Mathew Hampshire Waugh has spent the last decade working as an equity analyst at a global investment bank. He has worked with the top executives of many multi-billion-dollar companies and built relationships with many of the world's largest investment managers. Mathew's work is centred on forecasting technology trends, financial performance, and the intrinsic value of companies involved in markets including renewable energy, electric cars, battery technology, and biofuels. Prior to his career in the banking industry, the author gained his doctorate in materials chemistry from University College London, where he worked on novel coatings and nano-materials for use in energy-saving glazing and solar panel design. During his doctorate, Mathew registered a patent for an efficiency-enhancing coating for solar modules, published numerous scientific papers, and engaged in public speaking, consultancy, and media outreach.

From the Author: I wrote *Climate Change and the Road to Net Zero* to provide a generalist

reader with a clear comprehensive and objective take on the issues surrounding climate change and air pollution The book walks the reader through a history of energy innovation and the rise of human civilisation how scientists have come to understand our past climate and can now forecast future change the problems economists encounter as they attempt to piece together the potential monetary and social damages from climate inaction and a technology agnostic assessment of potential climate change solutions from climate engineering to mitigation including their costs risks and limitations The book demonstrates why sustainable technologies such as wind solar and batteries get cheaper with scale of production not time and why a rapid transition to a fully fledged net zero system will end up significantly cheaper than remaining bound to fossil fuels whilst also avoiding the worst impacts of climate change and preventing nearly eight million premature deaths each year from air pollution I hope Climate Change and the road to Net Zero delivers an understanding of humanity s relationship with Earth that is as intriguing as Simon Lewis and Mark Maslin s The Human Planet or Yuval Noah Harari s Sapiens I very much hope too that the book conveys the passion and call to action of David Wallace Well s The Uninhabitable Earth coupled with the sober economic analysis of The Climate Casino by William Nordhaus or Capital in the 21st century by Thomas Piketty and that it provides the technical rigour of Sustainable Energy Without The Hot Air by David MacKay the rationality of Hans Rosling s Factfulness and the eternal hope of The Future We Choose by Christiana Figueres and Tom Rivett Carnac I believe net zero will be cheaper cleaner safer more reliable more sustainable and will create more employment than if we remain bound to fossil fuels After reading the book I hope you will agree Mathew Hampshire Waugh Author Advanced Introduction to U.S. Environmental Law Elliott, E. D.,Esty, Daniel C.,2021-10-22 Providing a comprehensive overview of the current and developing state of environmental governance in the United States this Advanced Introduction lays out the foundations of U S environmental law E Donald Elliott and Daniel C Esty explore how federal environmental law is made and how it interacts with state law highlighting the important role that administrative agencies play in the creation implementation and enforcement of U S environmental law Taxing Energy Use Organisation for Economic Co-operation and Development,2013-02-19 Taxation is one of the most important government policies affecting energy use and therefore the environmental problems such as greenhouse gas emissions and air pollution to which various forms of energy use can give rise This report provides the first systematic comparative analysis of the structure and level of energy taxes in all OECD countries It presents effective tax rates on energy use in terms of both energy content and carbon emissions together with detailed graphical profiles of both the structure of energy use and energy taxes in each country It is a data rich tool that will help policy makers and analysts to evaluate the role and impact of current energy tax settings and to plan potential reforms The report offers comparative statistics on and graphical profiles of all 34 OECD countries Australia Austria Belgium Canada Chile Czech Republic Denmark Estonia Finland France Germany Greece Hungary Iceland Ireland Israel Italy Japan Korea Luxembourg Mexico Netherlands New Zealand Norway Poland Portugal Slovak Republic Slovenia Spain Sweden Switzerland
