**Designing Effective Feedback Processes in Higher Education** Naomi Winstone, David Carless, 2019-06-27 Feedback is one of the most powerful influences on student achievement yet it is difficult to implement productively within the constraints of a mass higher education system Designing Effective Feedback Processes in Higher Education A Learning Focused Approach addresses the challenges of developing effective feedback processes in higher education combining theory and practice to equip and empower educators It places less emphasis on what teachers do in terms of providing commentary and more emphasis on how students generate make sense of and use feedback for ongoing improvement Including discussions on promoting student engagement with feedback technology enabled feedback and effective peer feedback this book

Contributes to the theory and practice of feedback in higher education by showcasing new paradigm feedback thinking focused on dialogue and student uptake Synthesises the evidence for effective feedback practice Provides contextualised examples of successful innovative feedback designs analysed in relation to relevant literature Highlights the importance of staff and student feedback literacy in developing productive feedback partnerships Supports higher education teachers in further developing their feedback practice Designing Effective Feedback Processes in Higher Education A Learning Focused Approach contributes to the theory and practice of higher education pedagogy by re evaluating how feedback processes are designed and managed It is a must read for educators researchers and academic developers in higher education who will

benefit from a guide to feedback research and practice that addresses well recognised challenges in relation to assessment and feedback

The Smart Village Concept : Examples from Poland Sławomir Kalinowski, Łukasz Komorowski, Anna Rosa, 2022-05-31 The transformation of rural areas and the broadly understood problems of their development have been the subject of scientific analyses and lively public debate for many years The ongoing discussions stem from a reflection on the increased effectiveness of rural development policies and the search for new approaches to their programming at the local level They are also the result of a growing feeling that it is necessary to achieve sustainable development objectives more effectively and reduce social and economic disparities between rural and urban areas Among the emerging challenges in the last decade the transition to an information society has come to the fore however it should be stressed that the changes taking place are dependent on global technological and digital development The fact that rural areas are inhabited by about one quarter of the European Union's population makes us aware of the importance of these changes in rural areas In Poland this proportion is much higher and amounts to 40% Being aware of this fact it may be assumed that adaptation to transformations cannot be treated as an opportunity but as a necessity as more and more activities are carried out in the virtual world The importance of digital and communication technologies has been reinforced in recent months due to the COVID 19 pandemic which has transferred some activities to the virtual sphere Equipping rural populations with digital and communications skills will make it possible to reduce distance thereby increasing accessibility to goods and services especially public ones In this context information and communication technologies ICT are treated as an opportunity to overcome development related difficulties However their use depends on access to the internet in a given area Its lack or poor coverage in a particular area deprives it of the opportunities for development based on smart technologies or smart initiatives As regards the local dimension it is not only digital technologies that are growing in importance but also activities aimed to improve broadly understood living conditions of rural residents also on a micro scale In these transformations people and their skills are of unique value and waiting passively for change does not make much sense In this context technology can only be a tool as human competences are becoming the major driver for the improvement of the standard of living and quality of life Well identified local human resources form the basis for social innovation and consequently contribute to increased resilience of rural areas allowing them to solve problems faced by local communities The transition to an information society understood in this way has a significantly broader context than digital and communication technologies and comprises a range of social and agri environmental issues
