**JavaServer Faces** Hans Bergsten,2004-04-22 JavaServer Faces or JSF brings a component based model to web application development that s similar to the model that s been used in standalone GUI applications for years The technology builds on the experience gained from Java Servlets JavaServer Pages and numerous commercial and open source web application frameworks that simplify the development process In JavaServer Faces developers learn how to use this new framework to build real world web applications The book contains everything you ll need how to construct the HTML on the front end how to create the user interface components that connect the front end to your business objects how to write a back end that s JSF friendly and how to create the deployment descriptors that tie everything together JavaServer Faces pays particular attention to simple tasks that are easily ignored but crucial to any real application working with tabular data for example or enabling and disabling buttons And this book doesn t hide from the trickier issues like creating custom components or creating renderers for different presentation layers Whether you re experienced with JSF or a just starting out you ll find everything you need to know about this

technology in this book Topics covered include The JSF environment Creating and rendering components Validating input Handling user generated events Controlling page navigation Working with tabular data Internationalization Integration between JSF and Struts Developing custom renderers and custom components JavaServer Faces is a complete guide to the crucial new JSF technology If you develop web applications JSF belongs in your toolkit and this book belongs in your library

features in the JSF 2.3 MVC web framework in this definitive guide written by two of the JavaServer Faces JSF specification leads. The authors take you through real world examples that demonstrate how these new features are used with other APIs in Java EE 8. You'll see the new and exciting ways JSF applications can use to communicate between a client and a server such as using WebSockets invoking bean methods directly from Ajax, executing client side JavaScript when Ajax calls complete and more. Along the way you'll broaden your knowledge of JSF components and web APIs, best practices and learn a great deal about the internals of JSF and the design decisions that have been made when building the JSF API. For example you'll see what artefacts are now CDI injectable, how CDI changed JSF internally and what some of the caveats are when working with the CDI versions of a JSF artefact. Furthermore you'll build an example application from scratch. After reading *The Definitive Guide to JSF in Java EE 8* you'll be ready to build your own efficient and secure web applications.
