Dying in America Institute of Medicine, Committee on Approaching Death: Addressing Key End-of-Life Issues, 2015-03-19
For patients and their loved ones no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs, increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high quality, compassionate, evidence-based care consistent with their wishes. Dying in America evaluates strategies to integrate care into a person and family centered, team-based framework and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians, and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

God, Freud and Religion Dianna T. Kenny, 2015-03-05 Choice Essential Read. Did God create man or did man create God? In this book, Dianna Kenny examines religious belief through a variety of perspectives: psychoanalytic, cognitive, neuropsychological, sociological, historical, and psychiatric, to provide a coherent account of why people might believe in God. She argues that psychoanalytic theory provides a fertile and creative approach to the study of religion that attempts to integrate religious belief with our innate human nature and developmental histories that have unfolded in the context of our socialization and cultural experiences. Freud argued that religion is so compelling because it solves the problems of our existence. It explains the origin of the universe, offers solace and protection from evil, and provides a blueprint about how we should live our lives with just rewards for the righteous and due punishments for sinners and transgressors. Science, on the other hand, offers no such explanations about the universe or the meaning of our lives and no comfort for the unanswered longings of the human race. Is religion a form of wish fulfillment, a collective delusion to which we cling as we try to fathom our place and purpose in the drama of cosmology? Can there be morality without faith? Are science and religion radically incompatible? What are the roots of fundamentalism and terror theology? These are some of the questions addressed in God, Freud and Religion, a book that will be of interest to psychoanalysts, psychologists, and psychotherapists, students of psychology, psychoanalysis, philosophy, and theology, and all those with an interest in religion and human behaviour. Dianna
