Blueprint. Number 2 James B. Hunt, Jr. Institute for Educational Leadership and Policy,2008 The previous issue of *Blueprint* reported significant variability among state standards for education Such variability means that depending where a student attends school he might not cover the same material in a course called Algebra I or Algebra II or Grade 4 or Grade 6 Many citizens and leaders understand that having a single set of expectations for all students is an important initial step to improving both student achievement and equity In a recent national survey 69 percent of respondents indicated that they want to see one test and one set of standards for all students regardless of whether the federal government or the states design and administer them A growing number of state and national organizations have also expressed support for a single set of voluntary content and performance standards Regardless of who takes the lead to develop these content standards attention must be paid to the process that is used and the ultimate quality of the standards themselves the standards must be grounded in evidence about the essential knowledge and skills that students need to be prepared for college and work The standards must form a clear coherent message about teaching and learning in each subject area and serve as the basis of every child s education *Blueprint* is the policy primer of the James B Hunt Jr Institute for Educational Leadership and Policy Each *Blueprint* will focus on a critical issue in education policy highlighting key research for policymakers and prompting discussion of solutions within states and across the nation For the previous issue of *Blueprint* see ED505669 **Alabama College and Career Ready Standards in Grade 2 Mathematics** American Book Company,2016
