college students With clear eyed and experienced based optimism about techniques that help first gens succeed she then gives excellent specific suggestions for faculty graduate teaching assistants and the students themselves to help first gens learn to do STEM courses and college successfully This is an important and highly recommended book a gift of honesty and hope by an experienced STEM instructor who clearly cares deeply about first gen students and their college experience Dr Louise Hainline CUNY Brooklyn College Director Center for Achievement in Science Education CASE Director of NYS Collegiate Science and Technology Entry Program CSTEP Director of NIH Minority Access to Research Careers MARC Director NSF Improving Undergraduate STEM Education IUSE Peer Assisted Team Research program Director Brooklyn College subcontract NSF Institutional Research and Academic Career Development Awards IRACDA to SUNY Stony Brook As the college population becomes more diverse STEM instructors have a responsibility to cultivate the success of all students In this important and engaging book Gail Horowitz provides a valuable resource for understanding the educational experiences of first generation students and why they often struggle in STEM courses The author persuasively conveys two important insights First that first generation students can achieve success in STEM courses by becoming self regulated learners Second that college faculty and graduate instructors can easily introduce effective learning strategies into their courses These arguments are supported by extensive references to the research literature which provide a wealth of additional resources Just as important however is the deep humanity that the author brings to her subject a sincere belief that our classrooms and colleges are made better by the aspirations resilience and experiences of first generation students Dr Trace Jordan New York University G Horowitz s book should be required reading for both teachers and students It provides valuable insights into the behaviors and coping mechanisms of not only many first generation college students but also continuing generation students who struggle with STEM coursework Recognizing these behaviors and mindsets is the first step towards becoming a better educator Leda Lee M S Brooklyn College
