Transforming Coastal Zone for Sustainable Food and Income Security T.D. Lama, Dhiman Burman, Uttam Kumar Mandal, Sukanta Kumar Sarangi, H.S. Sen, 2022-08-09 Coastal areas are commonly defined as the interface or transition areas between land and sea including large inland lakes Overall about 50 70 % of the global population live within 100 km of the coastline covering only about 4 % of earth's land thereby drawing heavily on coastal and marine habitats for food building sites transportation recreational areas and waste disposal The people of these zones depend mainly on low productive agriculture due to several constraints such as prolonged water logging and drainage congestion in predominantly low lying areas with heavy soils during the wet season preponderance of saline and acid sulphate soils scarcity of good quality irrigation water particularly in the dry season seawater intrusion into adjoining lands and water pollution due to eutrophication and others affecting the aquatic habitats etc Carbon sequestration in coastal areas such as marshes lagoons etc has significant influence on soil quality and the carbon pool in soils as well as their impacts on the environment Over and above these the coastal areas are prone to disasters due to climate change leading to colossal loss of lives and properties in many areas Forestry and mangrove dynamics in particular because of their continuing diminishing nature are also subjects of interest affecting the ecology of coastal zones requiring appropriate attention The international symposium held in this context on Transforming Coastal Zones for Sustainable Food and Income Security in virtual mode in March 2021 offered scope to present and discuss various thematic areas by eminent scientists from all over the world The proceedings of selected papers presented reflect cross sectoral views of the areas highlighting wherever necessary a fusion of technologies with the ultimate target to suggest livelihood security and sustainable development for the sensitive coastal zones The book intends to share the knowledge with researchers academicians and various other stakeholders to address the complex problems of coastal regions production constraints social economic technical and environmental issues to draw out strategies for resilient agricultural technologies and improving livelihood security in coastal agro ecosystems **Teacher Expertise in the Global South** Jason Anderson, 2023-06-01 There are many expert teachers working in the global South and we can learn a great deal from them Neither of these claims should be surprising yet to date there has been almost no research conducted on expert teachers working in Southern contexts Instead the huge sums of money invested in attempting to improve teacher quality in the South have frequently been directed towards introducing exogenous practices or interventions

that may be culturally inappropriate practically infeasible and ultimately unsustainable often failing as a result In this pioneering book Jason Anderson provides an authoritative overview of the practices cognition and professionalism of expert teachers working in low income contexts By drawing upon both systematic reviews of teacher expertise and effectiveness research and his own fieldwork in India he argues that without an understanding of expert teachers working in all contexts worldwide we cannot truly understand expertise itself
