A Practical Guide to Environmental Biotechnology Jayanta Kumar Patra, Gitishree Das, Swagat Kumar Das, Hrudayanath Thatoi, 2020-08-03 This textbook provides practical guidelines on conducting experiments across the entire spectrum of environmental biotechnology. It opens with general information on laboratory safety rules and regulations as well as a description of various equipment commonly used in environmental laboratories. It then discusses in detail the major experiments in basic and advanced environmental studies including the analysis of water and soil samples, the isolation culture and biochemical characterization of microbes and plant tissue culture techniques and nutrient analyses. Each chapter features detailed method sections and easy-to-follow protocols and offers guidance on calculations and formulas as well as illustrative flow charts to assist with troubleshooting for each experiment. Given its scope, the book is an invaluable aid for laboratory researchers studying environmental biotechnology and a rich source of information and advice for advanced undergraduates and graduates in the fields of environmental science and biotechnology.

**Recent Progress in Solid Dispersion Technology** Kohsaku Kawakami, 2019-10-01 Amorphous solid dispersion (ASD) is a powerful formulation technology to improve oral absorption of poorly soluble drugs. Despite their being in existence for more than half a century, controlling ASD performance is still regarded as difficult because of ASD's natural non-equilibrium. However, recent significant advances in ASD knowledge and technology may enable a much broader use of ASD technology. This Special Issue, which includes 3 reviews and 6 original articles, focuses on recent progresses in ASD technology in hopes of helping to accelerate developmental studies in the pharmaceutical industry. In striving for a deep understanding of ASD non-equilibrium behavior, the Special Issue also delves into and makes progress in the theory of soft matter dynamics.

**Advances in Microfluidics Technology for Diagnostics and Detection** David Kinahan, Dario Mager, Elizaveta Vereshchagina, Celina Miyazaki, 2021-09-06 Microfluidics and lab-on-a-chip have in recent years come to the forefront in diagnostics and detection. At point-of-care in the emergency room and at the hospital bed or GP clinic, lab-on-a-chip offers the potential to rapidly detect time-critical and life-threatening diseases such as sepsis and bacterial meningitis. Furthermore, portable and user-friendly diagnostic platforms can enable disease diagnostics and detection in resource-poor settings where centralised laboratory facilities may not be available. At point-of-use, microfluidics and lab-on-a-chip can be applied in the field to rapidly identify plant pathogens, thus reducing the need for damaging broad-spectrum pesticides while also reducing food losses. Microfluidics can also be applied to the continuous monitoring of water quality and can support policy makers and protection agencies in

protecting the environment Perhaps most excitingly microfluidics also offers the potential to enable entirely new diagnostic tests that cannot be implemented using conventional laboratory tools Examples of microfluidics at the frontier of new medical diagnostic tests include early detection of cancers through circulating tumour cells CTCs and highly sensitive genetic tests using droplet based digital PCR This Special Issue on Advances in Microfluidics Technology for Diagnostics and Detection aims to gather outstanding research and to carry out comprehensive coverage of all aspects related to microfluidics in diagnostics and detection
