

## Chapter 4

# Accumulating and Assigning Costs to Products

## QUESTIONS

- 4-1 The cost of the raw materials entered into production is moved from the raw materials account to the work-in-process inventory account. The cost of manufacturing labor and overhead costs are assigned to production by adding them to the work-in-process inventory account. Finished goods are assigned the allocated or apportioned (as determined by the cost system, when manufacturing is completed, work is transferred to finished goods inventory, and costs are moved from the work-in-process inventory account to the finished goods inventory account. Finally, when goods are sold, these costs are moved from the finished goods inventory account to cost of goods sold.
- 4-2 Manufacturing organizations face greater challenges in product costing, especially the assignment of overhead costs, than most of service organizations do. The basic idea behind all manufacturing costing systems is to determine the costs that products accumulate as they traverse organizational resources during manufacturing, as described above in 4-1. In small organizations, goods are purchased rather than manufactured; the cost of the goods purchased is moved into an account that accumulates the cost of manufacturing inventory in the store. Hence, these systems overhead costs such as labor, depreciation on the store, lighting, and heating. The primary focus is total operations in the purchasing of product from its departments. Therefore, small organizations, like manufacturing organizations, face the issue of how to allocate various overhead costs to determine, for example, the cost of purchasing and selling products, or department costs.  
  
Service organizations that undertake major projects, such as in a consultancy, focus on determining the cost of a project. In such situations, the major direct cost, employee pay, is often a large proportion of the project's cost. The organization will also assign various overhead costs to determine project profitability.

**Management Accounting** Professor Carsten Berkau, 2020-04-20 Management Accounting is written for students in international Business Management study programs. It covers the widely applied syllabus of Cost Accounting and Management Accounting at universities on bachelor's and master's level. The book is based on more than 20 years' academic teaching experience in Germany and at international universities in South Africa, Malaysia, China, the Netherlands, and South Korea. In this text book, the application of methods and instruments comes first. Management Accounting follows a case study based approach. All cases are taken from previous exam papers and explained in detail. The text book starts with a case study of a manufacturing company and compares Financial Accounting to Management Accounting. It covers two points of view: 1. a General Management view with aspects of business planning, cost-volume-profit analysis, degree of operating leverage, mergers and cross border acquisitions, and risk valuation; 2. a Cost Accounting view with Management Accounting systems, flexible budgeting, cost allocations, performance measurement and monitoring, reporting, calculation, manufacturing accounting, job order and process costing, activity based costing, and multi-level contribution margin Accounting. On the UVK website, numerous exam tasks and complete solutions thereto are available in English. **Problems & Solutions in**

The book has been designed specially to serve as a complementary set to the textbook Advanced Accountancy Vol I and II, authored by the same team as Dr. S. N. Maheshwari and Dr. S. K. Maheshwari. It contains detailed solutions to all the practical problems given at the end of each chapter in Advanced Accountancy, as also solutions to the problems set at the recent University and Professional Examinations. A special feature of the book is that the problems have been properly graded.
