These data indicate that the 1990s have been a period of rapid growth in the number of people who are interested in the environment. This is reflected in the fact that the number of people who are interested in the environment has increased from 1990 to 1995. This is also reflected in the fact that the number of people who are interested in the environment has increased from 1990 to 1995.

For the purpose of this study, the following question was asked: "How many children in the sample showed a trend in performance in mathematics that could be interpreted as a change in performance over time?" All children in the first two grades showed such a trend in the first two changes. After the children in both grades were identified, the following question was asked: "How many of these children were also identified as being at risk for mathematics learning difficulties?"
