

# MALE REPRODUCTIVE SYSTEM

## Big Picture

The male reproductive system, consisting of the penis, testes, and epididymes, is necessary for reproduction. The system forms before a child is born, but until hormones called testosterone are released during puberty (which occurs when a male is 12-18 years old), the male reproductive system remains immature. The secretion of testosterone after puberty allows males to produce sperm via spermatogenesis. Matured sperms are then released from the body during ejaculation.

## Key Terms

**Reproductive System:** The system of organs that produces gametes and secretes sex hormones.

**Penis:** Male reproductive organ containing the urethra, through which sperm and urine pass out of the body.

**Epididymis (plural, epididymes):** One of two male reproductive organs where sperm mature and are stored until they leave the body.

**Testis (plural, testes):** One of two male reproductive organs that produces sperm and secretes testosterone.

**Sperm:** Male gamete (reproductive cell produced during meiosis with a haploid number of chromosomes).

**Testosterone:** Male sex hormone that promotes protein synthesis and growth, causing the most physical change during puberty.

**Sex Hormones:** Chemical messenger that controls sexual development and reproduction.

**Semen:** Fluid containing sperm and gland secretions that nourish sperm and carry them through the urethra and out of the body.

**Spermatogenesis:** Process of producing sperm in the testes.

**Ejaculation:** Muscle contractions that propel sperm from the epididymes and out through the urethra in males.

**Puberty:** Period during which humans become sexually mature.

**Luteinizing Hormone (LH):** Pituitary gland hormone that stimulates the testes to secrete testosterone and the ovaries to secrete estrogen.

**Adolescent Growth Spurt:** Period of rapid growth that occurs during puberty.

## Male Reproductive Structures

### Main structures of the male reproductive system:

- **Penis:** external genital organ with a long shaft and enlarged tip
  - The urethra passes through the penis; **sperm** and urine exit the body through the urethra
- **Testes:** located beneath the penis; produce sperm, excrete **testosterone**; covered by the scrotum (sac of skin)
- **Epididymis:** coiled tube lying atop the testis that stores sperm

### Ducts and Glands

- Ducts (vas deferens and ejaculatory ducts) transport sperm
- Glands (seminal vesicle, prostate gland) secrete substances that become part of **semen**
