Management Of Pulp And Paper Mill Waste:

Management of Pulp and Paper Mill Waste Pratima Bajpai, 2014-11-07 Pulp and paper mill industries are always associated with the disposal problem of highly contaminated sludge or bio solids. The development of innovative systems to maximize recovery of useful materials and/or energy in a sustainable way has become necessary. The management of wastes in particular of industrial waste in an economically and environmentally acceptable manner is one of the most critical issues facing modern industry mainly due to the increased difficulties in properly locating disposal works and complying with even more stringent environmental quality requirements imposed by legislation. This book presents a general Introduction on waste management in the pulp and paper industry and contains topics on the generation of waste in pulp and paper mills, waste composition, methods of sludge pre-treatment processes and technologies for conversion of pulp and paper mill waste into valuable products, waste reduction techniques employed in the pulp and paper Industry worldwide and future trends.

Strategies of Industrial and Hazardous Waste Management Nelson L. Nemerow, Franklin J. Agardy, 1998-03-09 *Strategies of Industrial and Hazardous Waste Management* by Nelson L. Nemerow and Frank J. Agardy. For years plant engineers, engineering professors, municipal engineers, EPA personnel and other professionals have relied on the expertise of these authors in the area of industrial and hazardous waste management. This book is full of new ideas, methods, models, data, updated information and new case histories. This latest classic reference from Nelson Nemerow and Frank Agardy is by far the most comprehensive and useful source available on the generation, treatment and disposal of all significant industrial and hazardous wastes. *Strategies of Industrial and Hazardous Waste Management* addresses the needs of its wide-ranging audience by dividing its coverage into four parts. Part I presents the basic information the industrial waste engineer needs to know about the environmental impact of various wastes, writing environmental impact statements, protecting streams from further pollution, calculating final treatments, testing treatment efficiency and the influence of economic factors on waste treatment decisions. Part II explores theories and designs of waste treatment and shows how waste can be reduced through proper operation of manufacturing plants. It ranges beyond the removal of suspended and colloidal solids to include coverage of neutralization, equalization and proportioning, removal of inorganic dissolved salts and private contract collection and treatment. Also included is a novel paradigm for obtaining zero pollution in the future through environmentally balanced industrial complexes. Part III demonstrates waste management in action using case studies from around the world to show theories and models successfully adapted and put into practice. All cases are based on the authors' actual experiences; the cases in Chapters 17, 19, 22, 23 and 24 have never been previously published. Part IV offers concise evaluations of all major liquid industrial wastes including their origins, characteristics and acceptable treatments. Industries are classified into six categories: apparel, food processing, materials, chemicals, energy and, in significantly extended coverage, non-point practices. Included are separate considerations of radioactive and hazardous as opposed to conventional waste. No waste management

professional should be without this essential volume Focused on need to know information common pitfalls and practical solutions to all kinds of problems Strategies of Industrial and Hazardous Waste Management is an answer source unlike any other
