Kolstad, 2000 The book includes the author's most important work on a variety of topics including the Hotelling model of spatial competition as applied to resource economics jurisdictional tax competition particularly in the context of resource taxes and environmental regulation both theoretical and empirical **Valuing the Environment: Methodological and Measurement Issues** Rüdiger Pethig, 2013-03-14 During the last decades environmental economics as a science has been very successful in improving our understanding of environment economy interdependence Using conventional economic methodology environmental aspects have been explicitly incorporated into economic models making use of the concept of externality This concept was already familiar to economists long before evidence of severe environmental deterioration found its way into the headlines and people's awareness But before that time external effects were not considered as being empirically very relevant they seemed to be like the example of the bees and the fruit trees somewhat bucolic in nature All that changed dramatically when it was no longer possible or easy to ignore the large scale environmental disruption with its negative feedback on consumers and producers caused by growing pollution and excessive use of environmental resources In diagnosing the discrepancy between private and social cost as the cause of the problem the externality paradigm proved very useful The correct diagnosis implies the straightforward cure to internalise all external cost namely the damage cost of pollution But it is one thing to identify the qualitative nature of the problem at an abstract conceptual level and quite another thing to place specific money values on pollution damage and society's valuation of the environment respectively in the context of specific pollution control problems Very often it is controversial not only how inefficient the no policy situation is but also what exactly the net benefit of any public action of reducing pollution is **Intermediate Environmental Economics** Charles D. Kolstad, 2011 **Strategic Information and Bargaining** Huei-Chin Lin, 1999 *Beyond Environmental Law* Alyson C. Flournoy, David M. Driesen, 2010-02-26 This book offers a vision for the third generation of environmental law designed to enhance its ability to protect our environment The book presents two core proposals an Environmental Legacy Act to preserve a defined

environmental legacy for future generations and an Environmental Competition Statute to spark movement to new clean technologies The first proposal would require for the first time that the federal government define an environmental legacy that it must preserve for future generations The second would establish a market competition to maximize environmental protection The balance of the book provides complementary proposals and analysis The first generation of environmental law sought broad protection of health and the environment in a fairly fragmented way The second sought to enhance environmental law's efficiency through cost benefit analysis and market mechanisms These proposals seek to create a broader more creative approach to solving environmental problems
