Macroeconomics By Nils Gottfries Textbook:

Macroeconomics Nils Gottfries, 2017-09-16 Written in a clear and direct style this is the ideal core textbook for students who seek a thorough understanding of the applications of macroeconomic theory. The book combines theoretical rigour with numerous illustrative examples and engaging policy discussions. This highly respected author has developed an innovative new approach to teaching macroeconomics based on combining microeconomic foundations with Keynesian style short run policy analysis to build one unified model. Gottfries critically acclaimed and highly relevant approach reinforces learning and makes it easier for students to comprehend providing the ideal preparation either for work or for further postgraduate study. The book is perfect for the higher level intermediate macroeconomics courses as well as offering a potential bridge between undergraduate level study and the step up to postgraduate and research level theory and content. Key features of this book include: A real world approach that takes into account the many market imperfections and rigidities that characterize economies in action. An international approach using examples from a variety of world economies and the ongoing comparison of US, UK and EU market behaviours. Theory supported and illustrated by the presentation and analysis of real world data. Detailed coverage of both long and short run approaches and the closed and open economies.

Seven Schools of Macroeconomic Thought Edmund S. Phelps, 1990-05-17 This book offers an excellent survey of various macroeconomic topics which feature prominently in the research agenda and have inspired both theoretical and policy debate. The book presents an authoritative and comprehensive summary and original critique of modern macroeconomic approaches by a scholar whose own contribution to the field is considerable. In each of his seven chapters the author reviews one school of economic thought. These are the Keynesian school of macroeconomics, the monetarist school, the New Classical school, the New Keynesian school, supply side macroeconomics and non-monetary models of macroeconomics, the real business cycle theory and the structuralist school which views changes in unemployment as the outcome of shifts in the structural characteristics of the economy. The book is the text of the first series of Ryde Lectures established by Lund University in Sweden.

Imperfect Competition, Differential Information, and Microfoundations of Macroeconomics Kiyohiko G. Nishimura, 1995 This volume links a microeconomic model of imperfectly informed firms and unions in monopolistic competition to a general theory of wage and price setting in a macroeconomic model. The analysis is based on a profit maximization and rational behaviour and is thus in line with the newly emerged New Keynesian approach in its emphasis on the microeconomic foundation of macroeconomics. The volume goes on to explain three stylized facts in macroeconomics: nominal rigidity, real rigidity and cost oriented prices presented in a coherent New Keynesian framework. The analysis also provides new insight into the role of competition in an economy with imperfectly and differentially informed firms. It shows that increased competition may increase nominal as well as real price rigidity and increased volatility of investment.
