

AP Macroeconomics Ultimate Guide

Unit 1: Basic Economic Concepts

Let's have a quick overview of what economics is all about!

Economics

- The study of how people, firms, and societies use their scarce productive resources to best satisfy their unlimited material wants.
- It is the systematic study of choice.
- In the realm of economics, all resources around us are considered to be limited; even the most basic things which exist around us like air or water.

Now, having an overall idea of what economics is all about, it's time to dive into some crucial concepts:

1.1 Scarcity

- All factors of production are scarce; therefore, the production of goods and service are also scarce.
- The economic problem states however that our needs are unlimited and as mentioned earlier, the resources available are scarce.

Macroeconomics V/s Microeconomics

- **Macroeconomics:** with macroeconomics, we consider the big picture– the nation's economy as a whole. E.g., would changes to the money supply have an effect on country A's imports and export?
- **Microeconomics:** microeconomics filters our scope to individuals in an economy while keeping the overall economy in mind.

Resources or Factors of Production

- **Labor** – Human effort and talent, physical and mental. This can be augmented by education and training (human capital).
- **Land or natural resources** – Any resource created by nature. This may be arable land, mineral deposits, oil and gas reserves, or water.
- **Physical capital** – Human-made equipment like machinery as well as buildings, roads, vehicles, and computers.
- **Entrepreneurial ability** – The effort and know-how to put the other resources together in a productive venture.

Organizations of Society

- **Tradition** – Tied to the evolution of economics, and it is related to subsistence and tribal life.
