Manual of Clinical Oncology Casciato, 2009-05-01. Manual of clinical oncology Dennis A. Casciato, **Manual of Clinical Oncology** Charles D. Sherman, 1987 The continuing success of the VICE s Manual of Clinical Oncology and the

continuing refinement of our educational objectives in cancer designed for graduating medical students and young practitioners coupled with significant additional knowledge in the cancer field have all led to the decision to publish a Fourth Edition. The collaboration of the World Health Organization WHO and the Pan American Health Organization PAHO in our international and regional conferences in cancer education and the development of courses using the Manual as a basic resource have aided further definition of the UICC's role in cancer education throughout the world. Our Revision Committee believes that we have incorporated in this small volume most of the knowledge about cancer which is essential for all students and practitioners to know and that we have done so in a clear and concise manner. A large proportion of the material presented herein is devoted to basic aspects yet presented so that the clinical implications are clear. Although we do not feel that general physicians need to know minor details about all cancers we feel it is particularly important to be somewhat thorough in our discussions of the more common cancers. We have omitted discussion of the rare cancers and limited ourselves to the major concepts and principles of the less common cancers.

#### **Uicc Manual of Clinical Oncology 10E**

O'Sullivan, 2021-01-15      *Clinical Oncology* International Union Against Cancer, 2012-01-28. The outstanding success of the First Edition and the expansion of our knowledge about cancer over the 5 years since its publication have led to the decision to publish a Second Edition which has been fully revised, rewritten and enlarged by the addition of several sections. The First Edition was translated into Italian, Japanese, Polish and Serbo-Croat and it is expected that additional translations in French, German, Spanish, Portuguese etc. will make this Second Edition a truly international basic cancer Manual. The Revision Committee is convinced that all students and general physicians should know a) the important basic aspects of cancer, b) some details of the most common cancers and c) a few important points about the less common cancers. An attempt has been made to strengthen Part I General Aspects which is considered to be the most important part of the Manual for the world's physicians. However, the most common cancers in one part of the world are not necessarily the same in other parts and it is planned to work with local groups to produce adaptations and translations as seem appropriate. In particular, the UICC is anxious to work with local national and international committees to help improve the educational experience of students and general physicians in the geographic areas in question. Regional Conferences held by the UICC in Latin America, Asia and the Middle East have resulted in initial plans to accomplish this aim.

**Clinical Oncology** Committee on Professional Education of UICC (International Union against Cancer), 2012-04-10. There can be no doubt that a knowledge of cancer is becoming of increasing importance to doctors throughout the world. The changing patterns of disease incidence following changes in living standards and public health services and in medical diagnosis and treatment reveal the importance of neoplastic disorders as causes of morbidity and mortality. If doctors are to recognise these conditions at the earliest opportunity and advise on the treatment they must be familiar not only with clinical appearances but with the scientific principles on which the management is based. These are so important that they must be assimilated during undergraduate

medical education and become an integral part of the doctor's professional equipment. The clinical study of a neoplastic disorder has usually been related to its site of appearance in the body and its treatment has been the concern of organ or system specialists. This has tended to obscure the fundamental principles of growth disorder which are common to many varieties of tumor. A unified approach of clinical oncology can recognise common features and highlight diversity as a stimulus to further investigation. It is at the same time becoming increasingly recognised that neoplasia is a multidisciplinary problem requiring the collaboration of many specialists: physicians, surgeons, radiotherapists, chemotherapists, pathologists, immunologists, epidemiologists and many varieties of research worker. But the fate of the individual patient with cancer is often determined by the first doctor he consults and this further emphasises the importance of sufficient education in oncology at all stages of medical training.
