Cardiovascular Remodeling Yan Yang, Yi Zhang, Ming Lei, Gui-Rong Li, 2023-08-25 Although the treatment has greatly progressed the mortality of cardiovascular diseases remains the leading cause of death worldwide Serious cardiovascular diseases e g myocardial infarction heart failure cardiac dysrhythmias and stroke are resulted from cardiovascular remodeling secondary to the cardiovascular risk factors including hypertension atherosclerosis cigarette smoking diabetes mellitus hyperlipidemia aging etc Cardiac remodeling involves a series of molecular cellular and interstitial alterations which manifest clinically as changes in size mass geometry and function of the heart In addition vascular remodeling is an active process of structural alteration involving vascular wall thickening and lumen stenosis due to endothelial injury vascular smooth muscle cell proliferation and matrix deposition This results in atherosclerosis and or stenosis followed by myocardial infarction stroke etc Thus studies on the mechanism of cardiovascular remodeling and new therapeutic approaches are important scientifically and clinically Cardiovascular remodeling is a response of specific cardiovascular cells including cardiomyocytes endothelial smooth muscle cells and interstitial cells to noxious hemodynamic metabolic and inflammatory stimuli The remodeling may initially be functional compensatory and adaptive but it progresses to structural alterations that become pathogenic when the damaging stimuli are sustained The mechanism of cardiovascular remodeling is complex and recent studies focus on improving and or reversing the remodeling by clarifying molecular mechanisms and identifying novel therapies Pharmacological anti remodeling RNA based long non coding RNA and microRNA treatment cell based iPS cardiac repair and cell free exosome approaches have been shown to improve cardiovascular remodeling alongside proangiogenic pro survival proliferative and immunogenic factors stimulating endogenous proliferative potential of cardiomyocytes However though advanced studies have progressed the prognosis of the affected patients remains poor Therefore understanding novel mechanisms identifying remodeling biomarkers and developing new therapeutic drugs and approaches can lead to new therapeutic options for treating patients with cardiovascular diseases **Journal of Histotechnology**
