**The Hindu Kush Himalaya Assessment** Philippus Wester, Arabinda Mishra, Aditi Mukherji, Arun Bhakta Shrestha, 2019-01-04 This open access volume is the first comprehensive assessment of the Hindu Kush Himalaya HKH region. It comprises important scientific research on the social, economic and environmental pillars of sustainable mountain development and will serve as a basis for evidence-based decision making to safeguard the environment and advance people's well-being. The compiled content is based on the collective knowledge of over 300 leading researchers, experts and policymakers brought together by the Hindu Kush Himalayan Monitoring and Assessment Programme (HIMAP) under the coordination of the International Centre for Integrated Mountain Development (ICIMOD). This assessment was conducted between 2013 and 2017 as the first of a series of monitoring and assessment reports under the guidance of the HIMAP Steering Committee. Eklabya Sharma (ICIMOD), Atiq Raman (Bangladesh), Yuba Raj Khatri (Nepal), Linxiu Zhang (China), Surendra Pratap Singh (India), Tandong Yao (China) and David Molden (ICIMOD and Chair of the HIMAP SC). This First HKH Assessment Report consists of 16 chapters which comprehensively assess the current state of knowledge of the HKH region, increase the understanding of various drivers of change and their impacts, address critical data gaps and develop a set of evidence-based and actionable policy solutions and recommendations. These are linked to nine mountain priorities for the mountains and people of the HKH, consistent with the Sustainable Development Goals. This book is a must-read for policy makers, academics and students interested in this important region and an essentially important resource for contributors to global assessments such as the IPCC reports. [Towards sustainable urban development: Use of geographic big data for spatial planning](#) Ying Jing, Jiaxing Cui, Yiyun Chen, Ding Ma, 2023-06-01 [Paid Work Beyond Pension Age](#) Simone Scherger, 2016-04-29 In many countries the number of people working beyond pension age is increasing. This volume investigates this trend in seven different countries, examining the contexts of this development and the consequences of the shifting relationship between work and retirement. **Exporting Virtue?** Pitman B. Potter, 2021-02-01 China's rise to prosperity on the international stage has been accompanied by increased tensions with international standards of law and governance. *Exporting Virtue* examines human rights as an example of China's international assertiveness and considers the implications of internationalizing PRC human rights policy and practice. Pitman B. Potter suggests that in the absence of clear and enforceable global human rights standards, China has been free to pursue its political interests and policy initiatives couched in terms of virtue but manifested as authoritarianism. China's international human rights activism invites scholars and policy makers around the world to engage critically with the issue. Drawing on both Chinese and English language sources, *Exporting Virtue* investigates the challenges that China's human rights orthodoxy poses to international norms and institutions, offering normative and institutional analysis and providing suggestions for policy response. [Thermal Radiation Heat Transfer](#) John R. Howell, M. Pinar Mengüç, Kyle Daun, Robert Siegel, 2020-12-09 The seventh edition of this classic text

outlines the fundamental physical principles of thermal radiation as well as analytical and numerical techniques for quantifying radiative transfer between surfaces and within participating media The textbook includes newly expanded sections on surface properties electromagnetic theory scattering and absorption of particles and near field radiative transfer and emphasizes the broader connections to thermodynamic principles Sections on inverse analysis and Monte Carlo methods have been enhanced and updated to reflect current research developments along with new material on manufacturing renewable energy climate change building energy efficiency and biomedical applications Features Offers full treatment of radiative transfer and radiation exchange in enclosures Covers properties of surfaces and gaseous media and radiative transfer equation development and solutions Includes expanded coverage of inverse methods electromagnetic theory Monte Carlo methods and scattering and absorption by particles Features expanded coverage of near field radiative transfer theory and applications Discusses electromagnetic wave theory and how it is applied to thermal radiation transfer This textbook is ideal for Professors and students involved in first year or advanced graduate courses modules in Radiative Heat Transfer in engineering programs In addition professional engineers scientists and researchers working in heat transfer energy engineering aerospace and nuclear technology will find this an invaluable professional resource Over 350 surface configuration factors are available online many with online calculation capability Online appendices provide information on related areas such as combustion radiation in porous media numerical methods and biographies of important figures in the history of the field A Solutions Manual is available for instructors adopting the text

**Advances in Architecture, Engineering and Technology**  
 Federica Rosso, Claudia Fabiani, Haşim Altan, Mourad Amer, 2022-03-17 This book examines a range of subjects with a specific focus on architectural and technological advancements Architecture is the constant innovation in designing for high efficiency in the performance of buildings in terms of planning construction and energy while maintaining creativity in its form Moreover the field of architecture goes hand in hand with that of technology Nowadays engineering technology has to cope with the rapid industrialization and urbanization seen in most countries Furthermore creative design and construction practices are challenging tasks to the architects and engineers to meet the ever growing demands of society Therefore this book on Advances in Engineering Science and Architectural Design is provided to cover a wide range of topics in architecture engineering and technology

**Microbial Symbiosis of Marine Sessile Hosts - Diversity, Function and Applications**  
 Suhelen Egan, Torsten Thomas, 2015-12-21 Modern molecular omics tools metagenomics metaproteomics etc have greatly contributed to the rapid advancement of our understanding of microbial diversity and function in the world's oceans These tools are now increasingly applied to host associated environments to describe the symbiotic microbiome and obtain a holistic view of marine host microbial interactions Whilst all eukaryotic hosts are likely to benefit from their microbial associates marine sessile eukaryotes including macroalgae seagrasses and various invertebrates sponges acidians corals hydroids etc rely in particular on the function of their microbiome For example marine sessile eukaryotes are under constant grazing colonization and fouling pressure from the millions of micro and macroorganisms in the surrounding seawater Host associated microorganisms have been shown to produce secondary metabolites as defense molecules against unwanted colonization or pathogens thus having an important function in host health and survival Similarly microbial symbionts of sessile eukaryotes are often essential players in local nutrient cycling thus benefiting both the host and the surrounding ecosystem Various research fields have contributed to generating knowledge of host associated systems including microbiology biotechnology molecular biology ecology evolution and biotechnology Through a focus on model marine sessile host systems we believe that new insight into the interactions between host and microbial symbionts will be obtained and important areas of future research will be identified This research topic includes original research review and opinion articles that bring together the knowledge from different aspects of biology and highlight advances in our understanding of the diversity and function of the microbiomes on marine sessile hosts

**The Cycling of Biogenic Elements and Their Microbial Transformations in Marine Ecosystems**  
 Feng Chen, Junfu Dong, Li Jianlon, 2024-12-11 With global climate change and the deterioration of the marine environment the biogeochemical processes of the main biogenic elements in the ocean have received considerable attention The spatiotemporal distribution patterns migration and transformation processes of marine biogenic elements as well as the responses to environmental factors such as global warming atmospheric

sedimentation eutrophication ocean acidification and hypoxia have attracted widespread attention Microorganisms are the main drivers of the biogenic factor cycle Climate change and the deterioration of the marine environment have profoundly affected the structure and function of microbial communities leading to changes in the biogenic factor cycle mediated by microorganisms and changing the position and role of the oceans in the global biogenic factor cycle and climate change
