

MODULE 3 EXAM (ANSWER KEY)

Question 1:

Explain why a patient with liver disease would have intolerance to fatty foods.

- A patient with liver disease would have intolerance to fatty food because insufficient bile production from the liver limits proper fat breakdown.

Question 2:

Explain in detail how the stomach contents enter the small intestine.

- The stomach contents exit into the small intestine through the pyloric sphincter, which acts as a gatekeeper. When it relaxes, a small amount of chyme is released into the small intestine. Once the chyme enters, a reflex triggers the sphincter to contract and close. This process repeats, with the sphincter alternating between relaxing to allow more chyme in and tightening to control the flow.

Question 3:

Look carefully at the diagram below. Label the following 5 organs of the digestive system. To receive credit for the intestines you must label the specific region.

- 1: Liver
- 2: Pancreas
- 5: Duodenum
- 6: Ileum
- 8: Ascending colon
