**Story in Children's Lives: Contributions of the Narrative Mode to Early Childhood Development, Literacy, and Learning** Kelli Jo Kerry-Moran, Juli-Anna Aerila, 2019-09-27 This book is based on the power of stories to support children in all areas of their lives. It examines the role narratives can play in encouraging growth in contexts and domains such as personal and family identity, creative movement, memory and self-concept, social relationships, or developing a sense of humor. Each chapter describes innovative and research-based applications of narratives such as movement stories, visual narratives to develop historical thinking, multimodal storytelling, bibliotherapy, mathematics stories, family stories, and social narratives. The chapters elaborate on the strength of narratives in supporting the whole child in diverse contexts, from young children on the autism spectrum improving their social skills at school to four and five-year-olds developing historical thinking to children who are refugees or asylum seekers dealing with uncertainty and loss. Written by accomplished teachers, researchers, specialists, teaching artists, and teacher educators from several countries and backgrounds, the book fills a gap in the literature on narratives. This work delves into the topic of narratives in young children's lives with a breadth of topics and depth of study not found elsewhere. Collectively, the insights of the contributors build a convincing case for emphasizing story across the various disciplines and developmental domains of the early childhood years. The writing style is scholarly yet accessible. Authors used a wide array of visual material to make their points clearer and show the reader what meaningful uses of story look like. Mary Renck Jalongo, Journal and Book Series Editor, Springer, Indiana, PA, USA

**Doing Ethnographic Research** Kimberly Kirner, Jan Mills, SAGE Publications, Inc., 2019-09-05 This workbook is loaded with exercises, how-to sections, and checklists all designed to serve as a supplemental support for students to apply the principles and concepts learned from the textbook it accompanies. With instructions and explanations written in a conversational style, it will help the student understand why the assignments are being used, why the skills they are developing are relevant, and how the exercises relate to the textbook content.

**The Power of Visuals: Innovations in Communication Design** Prof. Hannakumari Chauhan, 2023-06-15 Uncover the power of visuals in communication design, exploring innovative approaches and tools that enhance visual storytelling. This book is essential for designers seeking to create compelling and effective visual content.

Cognitive Science and the New Testament István Czachesz, 2017 Over the last few decades, our knowledge of how the human mind and brain works increased dramatically. The field of cognitive science enables us to understand religious traditions, rituals, and visionary experiences in novel ways. This has implications for the study of the New Testament and early Christianity. How people in the ancient Mediterranean world remembered sayings and stories, what they experienced when participating in rituals, how they thought about magic and miracle, and how they felt and reasoned about moral questions—all of that can be now better understood with the help of insights from cognitive science. Istvan Czachesz argues that the field of New Testament Studies witnesses the beginning of a cognitive turn. He surveys relevant

developments in the Cognitive Science of Religion and explores the field of cognitive and behavioral sciences in search of opportunities of gaining new insights about biblical materials Czachesz presents some methodological tools and initial steps together with a large number of examples of applying the cognitive approach to the New Testament and related ancient literature

*Transitions Between Consciousness and Unconsciousness* Marcus Rothkirch, Morten Overgaard, Guido Hesselmann, 2018-03-13 Over the last years a large body of experimental data have been generated in the attempt to understand consciousness and its neural underpinnings In this respect particular interest has been paid to the attempt to distinguish between conscious experience and unconscious states which however may still be considered as mental states e g in virtue of their representational nature This is of course not without reason A deep understanding of that which specifically characterizes conscious states including neural correlates and cognitive functions may crucially inform the ambition of understanding the relation between experience and the physical world Nevertheless the question has historically been challenged by the fact that consciousness is available in the first person only not to other people including scientists Different methodological traditions and choices have led to quite different understandings of how conscious and unconscious states relate and diverse empirical work has been inspired and guided by various cognitive and neurobiological theories of consciousness The very diverse viewpoints include such different positions as the idea that unconscious states are associated with the very same functional characteristics as conscious states and the idea that no informational state that is available for action can be completely unconscious The Research Topic *Transitions between consciousness and unconsciousness* is therefore devoted to this particular question how to understand the relation and transition between consciousness and unconsciousness We hope that the reader will find the collected articles both informative and thought provoking and that this Research Topic will stimulate the scientific debate
