new methods for tackling difficult mathematical problems In the lectures by Aur lien Djament polynomial functors appear as coefficients in the homology of infinite families of classical groups e g general linear groups or symplectic groups and their stabilization Djament s theorem states that this stable homology can be computed using only the homology with trivial coefficients and the manageable functor homology The series includes an intriguing development of Scorichenko s unpublished results The lectures by Wilberd van der Kallen lead to the solution of the general cohomological finite generation problem extending Hilbert s fourteenth problem and its solution to the context of cohomology The focus here is on the cohomology of algebraic groups or rational cohomology and the coefficients are Friedlander and Suslin s strict polynomial functors a conceptual form of modules over the Schur algebra Roman Mikhailov s lectures highlight topological invariants homoto py and homology of topological spaces through derived functors of polynomial functors In this regard the functor framework makes better use of naturality allowing it to reach calculations that remain beyond the grasp of classical algebraic topology Lastly Antoine Touz s introductory course on homological algebra makes the book accessible to graduate students new to the field The links between functor homology and the three fields mentioned above offer compelling arguments for pushing the development of the functor viewpoint The lectures in this book will provide readers with a feel for functors and a valuable new perspective to apply to their favourite problems   Educational Times and Journal of the College of Preceptors ,1908   *Educational Times* ,1908   **Centenary Volume, 1821-1921** Belfast Natural History and Philosophical Society (1821-),1924   The academy ,1895   English Mechanic and Mirror of Science and Art ,1871   *School Library Journal* ,1995   *Applied Mechanics Reviews* ,1996   The Banner of Gold ,1910   **The Academy and Literature** ,1895
