Kimbrell, 2004-01-01 During the last decade the Undersea and Hyperbaric Medical Society UHMS has witnessed an extraordinary growth of interest and activity in the field of hyperbaric medicine This is due in part to the important progress made in defining the mechanisms of action of hyperbaric oxygen therapy and to a growing awareness of its place in the medical treatment of various aspects of hypoxic related illnesses An increasing awareness of the significance of problems facing patients suffering from chronic and non healing wounds in our aging society and the

opportunity to improve patient outcomes has further stimulated the growth of this specialty. As with rapid growth in other specialties, the need exists for basic recommendations to guide practitioners on issues such as training, responsibility, staffing, credentialing, safety, and quality assurance. These recommendations are designed to help improve medical care, optimize outcomes, maintain safety, and positively affect the lives of our patients. This edition of the UHMS Guidelines for Hyperbaric Facility Operation is not intended to be inclusive, to re-write authoritative texts, or to usurp accepted organizations or certifying bodies, but often references these standards when appropriate. For example, in 2002 the UHMS established a voluntary clinical hyperbaric facility accreditation program. Recommendations contained in this report have been referenced as key survey elements of the accreditation process. As is the case with the practice of any medical specialty, responsibility to ensure competency, quality of care, and safety falls to the providers of that care and the institutions that support their practice. By providing these recommendations, the UHMS hopes to stimulate and support the continued evolution of the safe and effective practice of this specialty.

Hyperbaric Oxygen Therapy Indications Linda Ed Weaver, 2014-04-01. The Undersea and Hyperbaric Medical Society (UHMS) is an international non-profit organization serving over 2,400 members from more than 50 countries. The UHMS is the primary source of scientific information for diving and hyperbaric medicine physiology worldwide; the breadth of which is illustrated in the triennial report Hyperbaric Oxygen Therapy Indications. With leading experts authoring chapters in their respective fields, this publication continues to provide the most current and up-to-date guidance and support for scientists and practitioners of hyperbaric oxygen therapy. Hyperbaric Oxygen Therapy Indications, currently in its thirteenth edition, has grown in size and depth to reflect the evolution of the literature on the approved use of hyperbarics from both a clinical practice standpoint and insurance coverage perspective. To date, the committee recognizes fourteen indications, including the new indication: idiopathic sudden sensorineural hearing loss. Additionally, this book continues to be used by the Centers for Medicare and Medicaid Services and other third-party insurance carriers in determining payment for HBO₂ services.

Hyperbaric Medicine Practice, 4th Edition Dr. Harry T. Whelan, 2017-06-01. A textbook may sometimes gain the unusual trait of longevity; beyond all other books, it can be revised and remain a primary source of information for generations of students. Hyperbaric Medicine Practice seems destined to become such a book. This 4th edition, edited by Harry T. Whelan, pays tribute to its original author, Dr. Kindwall, who died in 2012. It also adds new information of interest to all in the field of diving and clinical hyperbaric medicine. Most chapters have been written or revised by new authors, but many have returned to update their chapters. New chapters include indications for hyperbaric oxygen treatment subjects recently approved for treatment, such as idiopathic sudden sensorineural hearing loss and central retinal vein occlusion. There are also chapters on submarine rescue and problems that pertain to technical and rebreather diving. This book will be an important addition to the library of physicians in clinical hyperbaric medicine and those involved with divers, recreational, commercial, and military, as well as other professionals who care for them.
