### How do sediments become a sedimentary rock?

Rocks are weathered and eroded over time to become sediments. Over thousands of years, sediments have been compacted and cemented together to form sedimentary rock.

### How does a metamorphic rock become an igneous rock?

A metamorphic rock can become an igneous rock by melting into magma underneath the earth's crust and cooled to form an igneous rock.

### Describe two ways in which an igneous rock can become a metamorphic rock.

**Way 1:** An igneous rock can be weathered and eroded into sediments. Then the sediments are compacted and cemented together to form a sedimentary rock. Finally, the sedimentary rock undergoes a tremendous amount of heat and pressure deep within earth to form a metamorphic rock.

**Way 2:** An intrusive igneous rock is exposed to heat and pressure under the earth's crust and becomes a metamorphic rock.

### How does magma become sediments?

Extrusive igneous rocks are weathered and eroded into sediments.
