

String Class, Documentation

The screenshot shows the Oracle Java documentation page for the `String` class. The browser address bar shows the URL `https://docs.oracle.com/javase/8/docs/api/java/lang/String.html`. The page header includes navigation links like 'Overview', 'Package', 'Class', 'Use Tree', 'Deprecated', 'Index', and 'Help'. Below the header, there are links for 'Prev Class', 'Next Class', 'Frames', 'No Frames', and 'All Classes'. The main content area shows the class name 'String' and its inheritance hierarchy: `java.lang.Object` and `java.lang.String`. It also lists implemented interfaces: `Serializable`, `CharSequence`, and `Comparable<String>`. The code snippet shows the class declaration: `public final class String` extending `Object` and implementing `Serializable`, `Comparable<String>`, and `CharSequence`. A paragraph explains that the `String` class represents character strings and that all string literals in Java programs are implemented as instances of this class. Another paragraph states that `String` objects are constant and immutable, and that `StringBuffer` supports mutable strings. Two code examples are provided: one showing a simple string declaration and another showing the equivalent `String` object creation from a character array.

compact1, compact2, compact3
java.lang

Class String

java.lang.Object
java.lang.String

All implemented interfaces:
Serializable, CharSequence, Comparable<String>

```
public final class String
extends Object
implements Serializable, Comparable<String>, CharSequence
```

The `String` class represents character strings. All string literals in Java programs, such as `"abc"`, are implemented as instances of this class.

`String` are constant; their values cannot be changed after they are created. `StringBuffer` support mutable strings. Because `String` objects are immutable they can be shared. For example:

```
String str = "abc";
```

is equivalent to:

```
char data[] = {'a', 'b', 'c'};
String str = new String(data);
```
