Trigeminal Neuralgia  
Giulia Di Stefano, 2022-11-30 Trigeminal Neuralgia is a unique neuropathic facial pain condition characterized by unilateral paroxysmal pain most often described as stabbing or electric shock like restricted to the distribution of one or more divisions of the trigeminal nerve territory and triggered by innocuous stimuli Trigger zones are reported in virtually the totality of patients and represent the hallmark sign of Trigeminal Neuralgia The development and application of a dedicated software allowed trigger zone overlap profiling of the extraoral and intraoral territories The analysis of the natural history of Trigeminal Neuralgia showed that the failure of the treatment with first line drugs carbamazepine and oxcarbazepine most of the times is not due to the inefficacy of the drug but rather to undesired effects to a level that causes interruption of treatment or a dosage reduction to an insufficient level These results suggest the opportunity to develop a better tolerated drug Winner of the Competition Prize for PhD Thesis 2020 arranged by Sapienza University Press

analyzed in the latter chapters of the book Malta s government has achieved varying degrees of success in its exercise of influence in these EU decision making processes *Induced plant responses to microbes and insects* Corné M. J. Pieterse, Marcel Dicke, Saskia C. M. Van Wees, Erik H. Poelman, 2014-04-14 Plants are members of complex communities and interact both with antagonists and beneficial organisms An important question in plant defense signaling research is how plants integrate signals induced by pathogens insect herbivores and beneficial microbes into the most appropriate adaptive response Molecular and genomic tools are now being used to uncover the complexity of the induced defense signaling networks that have evolved during the arms races between plants and the other organisms with which they intimately interact To understand the functioning of the complex defense signaling network in nature molecular biologists and ecologists have joined forces to place molecular mechanisms of induced plant defenses in an ecological perspective In this Research Topic we aim to provide an on line open access snapshot of the current state of the art of the field of induced plant responses to microbes and insects with a special focus on the translation of molecular mechanisms to ecology and vice versa
