Mind, Bulletproof Kaspar Schäfer, 2020-07-02 If you are looking for the blueprint for mastering your mind to make it work for you then read more The mind is a very complex system The brain itself has 86 billion neurons and each neuron can make up to 10 000 connections to other neurons There is always room for improvement to make this a system that works for you My name is Kaspar Schäfer I am a mental athlete and researcher who has spent several years coaching students and other individuals to work their way towards mental mastery I had challenges prior to my journey in cognition training where I had been the lowest performing student in my class This problem would plague me from middle school to college where I had numerous run ins with getting kicked out of school for violating academic probation and being unable to keep my GPA above 1.7 I chose to take a different approach to learn spending most of my early 20s learning how to learn It ignited my passion for mental development that had led me to help so many others in overcoming the obstacles I've had and I have maintained a successful track record in doing so You can learn ANYTHING Have you ever had trouble with using your mind to your advantage Do you find your thoughts rendered invisible by brain fog Has it always been hard to retain the information you are learning Do you tend to forget even the most important things These problems at face value seem difficult to conquer especially if you don't have methods to help combat these drawbacks I've been there and faced countless instances where I wanted to give up and just assume my brain simply wasn't good enough to achieve the things I wanted it to But believing in lies is a principle nobody should adopt The solution isn't taking a nootropic supplement or having a 95th percentile IQ The solution is adopting a new way of learning and inherently adopting a new lifestyle In the process you redefine your mind as a new mind a mind that is BULLETPROOF programmed to tackle any mental obstacle in its path In Your Mind Bulletproof you'll discover The REAL reason why you have a hard time mastering your mind and can't make it bulletproof The number one technique to improve your memory you could have implemented daily How you can remember things in ways that will fascinate your peers Study and synthesis tactics you can use to connect new information in ways you never had done before

Ideas that reassure you mental mastery is NOT genetic and that your thinking power can be constantly improved for the rest of your life How to turn your brain into a mean lean calculating machine The habits and activities that separate the top thinkers from the rest of the world And so much more Many debacles individuals face while learning can be rooted they can be traced back to the way their minds work and how they think But teachings in psychology and neuroscience imply time and time again this is only a phase to progress through and it is NOT a norm to deal with Your Mind Bulletproof will give you a clear blueprint and explain why you may haven t gotten out of this phase in mastering the mind If you have never taken the steps to improve your mind you can still make it bulletproof p If you have had your own experiences with mental fitness this book will still provide you new information to take away that not found in other brain training books So if you want to build the mind you dream about and materialize your bulletproof mind into an object of reality then scroll up to the top of the page and click the buy now with the 2 click button to get your book instantly *Manage Your Mindset* Janet Hanson,2017-09-08

information processing system that often eludes our comprehension capacity The brain gathers extracts and analyzes information at any given time and in turn executes myriad complex procedures some of which are automated some voluntary some conscious and some unconscious Mind Hacking shows you how to reprogram your mindset such as reprogramming a machine to provide you with increased mental performance and satisfaction Mind Hacking is not just about thought it is about learning about our thoughts a concept known as metacognition through meta thinking By doing so we will hack back into our brains and rewrite the code based on what we want to do in school jobs relationships and life Mind Hacking is a way of fixing the thoughts of difficulty and excelling in the goals you set There are three key steps to hack the mind be mindful of what you are doing pick new thoughts to replace the thoughts of the question and eventually remove any thoughts that will be widely discussed in this book Similarly our realm of perception is no less reality but different from the world of physics Computers presented us with a magnificent blueprint to think about the mind Our impressions are like bits they re fleeting intangible ephemeral And they can be exploited for doing fresh and amazing stuff with some basic tools an epiphany like that of Woz which he had in his cubicle all those years ago Today starts a similar change one that takes place not on the keyboards and machines but absolutely in your head Like the Digital Revolution which could not be seen but was intense in its effects this revolution is a silent meteorite which is hurtling toward the planet Earth a massive shift in human thinking Just as early hackers twisted the technological universe so do mind hackers twist the thought world One had to accept the theory that writing a software program was just the start of being a hacker Improving a device was the real test of the skills of a hacker Maybe even with Gandhi and Mandela and King Richard Stallman a complex and controversial figure has deeply influenced the life and the technologies you use And the reason Stallman started off on his groundbreaking crusade was a printer crash As far back as 1977 Stallman was a well trained programmer at the MIT s Artificial Intelligence Lab My goal was to create a solution a series of specific exercises stuff I could do and calculate that would help me to debug my trouble thinking and then write powerful new code that would propel my life into exciting new orbits The understanding of objects and their actual size plays an enigmatic role in the depth perception If we look at an object we recall memories of its scale form and design Then the mind applies this image to what we see using scale to calculate the distance However sometimes this quick and dirty analogy can trip us particularly when we experience something unfamiliar Bruce Goldstein a psychologist provides a psychological description of an anthropologist who encountered an African bushman living in dense rainforest
