International studies in time perspective Maria Paula Paixão, José Tomás da Silva, Victor Ortuño, Pedro Cordeiro, 2013-12-01 This book integrates several papers which were presented on the 1st International Conference on Time Perspective Converging Paths in Psychology Time Theory and Research that took place 5-8 September 2012 at the University of Coimbra. Being the first we hope it to be a milestone in highlighting the effort spent by different psychological approaches to understand the role played by time concepts in individual group and organizational development. The Conference was hosted by the Faculty of Psychology and Educational Science of the University of Coimbra, Portugal; its foundation takes back to 1290 and an institution for which the notions of a rich past history and future strategic planning constitute the cornerstones of today's concerns. In a moment in time where the past, the present and the future are intensively invested with meaning and intention, researchers coming from all over the world reflected on how time perspectives impact on our lives from our more proximal to our most distal socio-ecological contexts. It reunited more than 300 participants coming from 42 countries spread all over the 5 continents. The chapters that are included in this book are a good illustration of the multifaceted focus on the research of subjective time in the psychological science. We hope that this book is able to nourish the next wave of researchers on psychological time concepts, encouraging them to pursue and renovate the theory, the research efforts and the practical applications in this exciting field of psychological enquiry. **Books in Print**, 1991

**Climate Vulnerability**, 2013-03-15 Climate change has been the subject of thousands of books and magazines, scientific journals and newspaper articles daily. It's a subject that can be very political and emotional, often blurring the lines between fact and fiction. The vast majority of research studies, projections and recommendations tend to focus on the human influence on climate change and global warming as the result of CO<sub>2</sub> emissions, often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence. *Climate Vulnerability: Five Volume Set* seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom-up approach, including CO<sub>2</sub> emissions, population growth, emerging affluence and many others to our five most critical resources: water, food, ecosystems, energy and human health. Inclusively determining what these threats are while seeking preventive measures and adaptations is at the heart of this unique reference work. *Takes a Bottom Up approach* addressing climate change and the threat to our key resources at the local level first and globally second, providing a more accurate and inclusive approach. Includes extensive cross-referencing which is key to readers as new connections between factors can be discovered. Cuts across a number of disciplines and will appeal to Biological Science, Earth Environmental Science, Ecology and Social Science, comprehensively addressing climate change and other threats to our key resources from multiple perspectives.
