From Is to Ought: The Place of Normative Models in the Study of Human Thought Shira Elqayam, David E. Over, 2016-08-12

In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume s strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between

normative ought rationality based on conforming to normative standards and instrumental is rationality based on achieving one's goals. Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality. This research topic brings together diverse contributions to the continuing debate. Featuring contributions from leading researchers in the field, the e-book covers a wide range of subjects arranged by six sections: The standard picture, Normativist perspectives, In defence of soft normativism, Exploring normative models, Descriptivist perspectives, Evolutionary and ecological accounts, Empirical reports. With a total of some 24 articles from 55 authors, this comprehensive treatment includes theoretical analyses, meta-theoretical critiques, commentaries, and a range of empirical reports. The contents of the Research Topic should appeal to psychologists, linguists, philosophers, and cognitive scientists with research interests in a wide range of domains from language through reasoning, judgment, and decision making, and moral judgment, to epistemology and theory of mind, philosophical logic, and meta-ethics.

Preventing Weaponization of CNS-acting Chemicals Michael Crowley, Malcolm Dando, 2025-11-24
Recent advances in neuroscience, the study of the mechanisms within the brain that underlie our behaviours and what happens when these go wrong, have been profound. However, benignly intended neurological research that seeks to understand dysfunction in the central nervous system (CNS) could be misused, for example in the development of novel CNS-acting chemical agent weapons for use in armed conflict and also in repression of civilian populations. This book follows a 3-step Holistic Arms Control approach, examining the bio-chemical agents and relevant physiological systems they affect, as well as associated dual-use technologies that need to be regulated, analysing a range of potentially applicable international law, international arms control, disarmament, and other instruments, and attendant control regimes, constraining misuse, and finally providing a strategy to strengthen existing regulatory mechanisms, as well as suggest new measures to prevent the misuse of the neurosciences and associated dual-use technologies without limiting the widespread health and other societal benefits that flow from their benign application. Suitable for biochemists and researchers in the areas of neuroscience, neurochemistry, and neuropharmacology, this book will also be of interest for those working in arms control, disarmament, and related legal fields, as well as forensic medicine and toxicology.

Management, International Adaptation John R. Schermerhorn, Daniel G. Bachrach, 2024
Management 15th edition continues to offer the same balanced theoretical approach as with previous editions. Students need an active and engaged learning classroom environment that brings personal meaning to course content and the instructor's course objectives. The book communicates with students through rich, timely features and cases that bring management topics, theories, and concepts to life. The underlying goal is to translate foundation theories into lasting tools for students as they move beyond the classroom where their skills will be put to the test. This international edition has been revised and updated with a focus on timely content, student engagement through real-world challenges, and personal career issues. Centralizing new topics such as diversity, equity, inclusion, and social impact, this edition introduces

new feature of Issues to attract learners attention to timely social and organizational issues as well as new cases and more opportunities for self assessment
